COPD and Blended Learning Theory: From Readmission Reduction to Admission Prevention

March 28, 2018 | 2:00pm-3:00pm

Description:

As the landscape of health care continues to evolve at a rapid pace, we must be sure that we are applying the evidence that helps support patient-centered care. Health care organizations are now in the transition from fee-based to value-based care. Data and evidence are now part of our daily care routines and we can use these tools to help us achieve the Triple Aim. According to the Institute of Healthcare Improvement, "improving the US health care system requires simultaneous pursuit of three aims: improving the patient experience of care (including quality and satisfaction); improving the health of populations; and reducing the per capita costs of health care."

Learning Outcomes:

At the completion of this program, the participant will be able to:

- State prominent reasons for frequent readmissions.
- Identify social disparities that contribute to frequent readmissions.
- Explain concepts to reducing readmissions.
- Formulate a strategy to reduce readmissions and prevent admissions.

Instructor:

Jared Blevins BSRC, RRT-ACCS

Credits Available:

Licensed Nurses,
Respiratory Care
Practitioners, and Others

Price:

Consortium Member \$0;
Non-Consortium \$25;
Students \$0

Register online at:
