

EMDR for Traumatic Brain Injury

DESCRIPTION

EMDR is shown to be effective in the treatment of a variety of different issues, including trauma, anxiety, and depression. EMDR can also be an effective way to reduce the impact of traumatic brain injuries, including post-concussive syndrome. There are several modifications and considerations when using EMDR and other therapeutic modalities in the treatment of traumatic brain injuries.

OBJECTIVES

Upon completion of this program, the participant should be able to:

1. Recognize symptoms related to mild to moderate traumatic brain injury.
2. Demonstrate an understanding of different treatment options, including EMDR, to reduce the impact of traumatic brain injury.
3. Identify the need for modifications to standard treatment options when working with individuals with traumatic brain injuries and what those modifications are.
