

Assessment and Management of the Lumbopelvic Region

Target Audience

Physical Therapists, Physical Therapist Assistants

Course Description

This course will focus on the examination, differential diagnosis, and treatment of frequently encountered clinical presentations in patients with selected neuromuscular and musculoskeletal dysfunction involving the lumbopelvic region. A case-based format will focus upon relevant issues pertaining to the differentiation of clinical conditions involving the various regions. Structured laboratory sessions will provide instruction in pertinent assessment techniques as well as an introduction to applied manual therapy techniques for treatment of the lumbopelvic region. Emphasis will be placed on enhancing clinical decision-making skills and integrating manual therapy procedures within the overall plan of care for the patient. Relevant research and evidenced based principles will be presented and discussed. The course will include lectures, discussions, and structured laboratory sessions.

Learning Objectives

At the conclusion of this session, participants will:

1. Demonstrate an understanding of the principles of differential examination for the lumbopelvic region.
2. Competently perform examination procedures utilized in the clinical assessment of lumbopelvic region.
3. Apply the indications and contraindications for mechanical evaluation and treatment of the lumbopelvic region.
4. Recognize and apply the indications and contraindications for manual therapy interventions.
5. Utilize and assess the expected outcomes of a variety of treatment interventions, including manual therapy techniques for the lumbopelvic region.
6. Competently perform manual therapy techniques for the lumbopelvic region.
7. Design effective treatment protocols based upon clinical classifications for patients with lumbopelvic dysfunction.
