DESCRIPTION

This webinar provides an overview of Children's Advocacy Centers (CACs) in South Carolina, with a focus on their structure, function, and impact on healthcare providers in the Pee Dee region. CACs utilize a multidisciplinary team (MDT) model that brings together healthcare professionals, law enforcement, child protective services, mental health providers, and legal professionals to coordinate the investigation, treatment, and prevention of child abuse in a child-friendly, trauma-informed environment.

Participants will explore how regional CACs—such as the South Carolina Network of Children's Advocacy Centers and local centers like the Durant Children's Center and CARE House of the Pee Dee—support coordinated care delivery, reduce duplication of services, and improve outcomes for pediatric patients experiencing abuse or neglect.

The webinar will also examine the implications for healthcare providers, including mandated reporting responsibilities, participation in MDTs, trauma-informed care practices, documentation standards, and collaboration with community partners. Regional data and examples will highlight the scope of CAC services in the Pee Dee, where hundreds of children receive coordinated medical, forensic, and behavioral health services annually.

By the end of the session, participants will better understand their role within the CAC framework and how collaboration with CACs enhances patient care, supports legal processes, and strengthens community health outcomes.
