Introduction

This publication provides information about the number of healthcare professionals actively practicing across the state along with measures of the health status of the population in South Carolina. This information is presented in several ways:

- Detailed tables by county and region reporting the number of healthcare professionals with a primary practice site in that
 area, the age and racial profile of the population, a selection of vital statistics and health status indicators, information about
 healthcare facilities, and a selection of statistics related to socio-economic conditions that are closely associated with
 healthcare status and outcomes;
- Dot maps showing the distribution of healthcare professionals by their primary practice location zip code;
- Shaded county-level maps showing the distribution of healthcare professionals relative to population, based on primary practice location; and
- Summary tables, by profession, showing the total number of healthcare professionals who report having either a primary or a secondary practice location within that county. If a health professional reports having both a primary and a secondary practice in the same county, they are counted only once in the 'primary practice' count. Providers who have more than one secondary site outside of their primary practice county are counted in each unique secondary county location.

The following professions are profiled in this report: physicians, nurses (including registered nurses, certified nurse midwives, nurse practitioners, certified registered nurse anesthetists, clinical nurse specialists, and licensed practical nurses), dentists and dental hygienists, occupational therapists and occupational therapy assistants, optometrists, pharmacists and pharmacy technicians, physical therapists and physical therapist assistants, physician assistants, respiratory care practitioners, clinical social workers, and psychologists. Professions are ordered this way to remain consistent with previous editions of this publication.

Detailed notes on data sources and regions can be found in Appendix 1 and Appendix 2.

This information has been compiled by the South Carolina Office for Healthcare Workforce (SCOHW). SCOHW is a division of South Carolina AHEC that studies issues affecting the balance of supply and demand for different types of healthcare professionals across South Carolina. Our primary mission is to develop accurate, reliable information about the healthcare workforce in South Carolina and to make that information widely available to support planning and policy decisions. Neutrality is of the utmost importance when disseminating data and information that may inform policy. We strive to be neutral in our approach to workforce analysis, providing accurate, timely information that is grounded in evidence and free from bias or agenda. Readers interested in additional information on any of the licensed health professions included in this publication are welcome to contact us directly through our website: www.scahec.net/scohw. This report is also available for download at no cost on our website.

Data Sources, Definitions and Limitations

A NOTE ABOUT COVID-19:

The data in this report represent the activity status and practice location of the licensed healthcare workforce in South Carolina in 2018, 2019 and 2020, largely prior to the COVID-19 pandemic. Due to the disruptive influence of the pandemic on the healthcare services and employment patterns of health professionals, caution should be used in interpreting these data for current conditions.

Health Professions Data Source

The professions profiled in this report are required by state law to obtain a license to practice within South Carolina. In South Carolina, health workforce data are collected during the license renewal process mandated by the regulatory boards within the South Carolina Department of Labor, Licensing and Regulation (LLR). Some professions in the state renew their license every two years (biennially) and others renew annually. Due to the timing of data availability and because 2018 nurse data were not published in previous data books, nurse data for both 2018 and 2020 are reported in the county and region pages; only the 2020 maps are included in this book.²

While the specific data elements collected during the renewal process vary slightly for each licensed group, each licensure database includes basic demographic, practice, and location information for each of the healthcare profession groups included in this book. All data are self-reported by the licensee at the time of initial application for licensure and subsequent license renewal.

The South Carolina Revenue and Fiscal Affairs Office, Health and Demographics Division (RFA-HDD) is the official repository for statistical data relating to licensed health professionals in South Carolina. The RFA-HDD cleans, maintains, and stores the licensure data provided by LLR. SCOHW obtains deidentified data files from RFA-HDD and uses them to create the counts and maps of healthcare providers in this book and for other health workforce analyses.

Health Professions Data Definitions

Who is defined as actively practicing in the state?

The counts of licensed healthcare professionals in this report <u>include</u> individuals who hold an active license to practice and report they are actively practicing in their field in a nonfederal setting within the state of South Carolina. This definition may

¹ An exception is made for health professionals who practice solely within a federal or military facility, such as a Veterans Administration hospital, and nurses who hold a multi-state license in another Nurse Licensure Compact state. See Limitations for additional information.

² Maps for RNs in 2018 can be found in "The South Carolina Registered Nurse Workforce | 2018" report, available at https://www.scahec.net/scohw/reports/134. All 2018 nurse maps are available upon request.

include educators, researchers, and administrators who do not engage in direct patient care but are still actively engaged in their profession and the workforce.

Active: Licensed individuals who are currently practicing or seeking employment in their respective profession.

In-state: Licensed individuals who practice within South Carolina.

Nonfederal: Licensed individuals who do not report working for the federal government or within a federal practice setting, such as a military installation or Veterans Affairs facility. Physicians (doctors of medicine [MDs] and doctors of osteopathy [DOs]) who indicate a primary practice setting in a federally-qualified health center or rural health center are counted among the nonfederal physician workforce because they provide services to the civilian population. In 2020, the nurse licensure renewal forms did not include a question on federal status; therefore, unlike previous years, the 2020 count of nurses licensed in SC may include nurses who are employed in a federal setting (see "Federal" bullet below).

Residents-in-training: Licensed physicians (MDs and DOs) who are enrolled in graduate medical education programs and actively practicing. These residents-in-training contribute a significant amount of care to South Carolina's population and are included in the physician counts in this book. The 1,740 residents-in-training who were actively practicing in the state at the time this information was collected made up approximately 13% of the entire physician workforce.

Clinical social workers were first included in the 2019 South Carolina Health Professions Data Book. Social worker counts include individuals with a license designation of LISW-Clinical Practice, LISW-Advanced Practice, LISW-Dual (clinical practice and advanced practice), or LMSW. LMSWs are included if they report a practice setting in non-profit agencies, government agencies or health delivery facilities such as hospitals and hospice.

Who is excluded from the active, in-state nonfederal counts?

A health professional may hold a license to practice in South Carolina, but not everyone who holds a license is actively practicing within the state. Healthcare professionals may change their work status over time by changing from full- to part-time, temporarily leaving the workforce to have children or care for family members, retiring, moving to another state but maintaining their South Carolina license, or maintaining their license but working in another field. Including licensees who are not actively practicing would overestimate the workforce available to provide care.

The counts in this book <u>exclude</u> individuals who are not actively practicing within their field, do not have a practice location within South Carolina, or are employed by the federal government.

Inactive: Licensed individuals who are retired or not actively practicing in their current field.

Out-of-state: Licensed individuals who do not report a practice location within South Carolina.

Federal: Licensed individuals who indicate their employer as "Federal, Military" or "Federal, Civilian" and are employed in military or federal practice settings (with the exception of physicians employed in federally qualified health centers and rural health centers, which are included in nonfederal physician counts as noted previously). As long as a health professional is

licensed in one state or territory, they can work under federal employment in any state;³ therefore, we are unable to identify federal health professionals who do not hold a license in South Carolina. Additionally, federal health professionals serve only specific populations and not the general public.

Counts may be further restricted due to criteria unique to certain professions. Profession-specific exclusions are:

Social Workers: Individuals with a license type of LMSW who report a practice setting of "other" (i.e., outside of a non-profit agency, government agency, or health delivery facility) and all individuals with a license type of LBSW are excluded in counts of clinical social workers.

Registered Nurses: South Carolina participates in the enhanced Nurse Licensure Compact (eNLC).⁴ Registered nurses (RNs) in eNLC states and territories may apply for a single-state or multi-state license. A single-state license allows RNs to practice only within their state of permanent residence (home state). A multi-state license, much like a driver's license, allows RNs to practice within their home state and in any other participating eNLC state without having to obtain additional licenses or registrations. RNs who hold a current multi-state license with South Carolina as their home state and indicate an active practice location within South Carolina are counted in the 2018 licensure data. eNLC nurses licensed in a home state outside of South Carolina are not captured in our state's licensure data because they are not required to register with the SC Board of Nursing.

How are health professionals assigned to a county?

Individuals are assigned to a county and zip code based first on their self-reported primary practice location county; if primary practice location is unknown, they are assigned a location based on business address. If there is no other usable location information (e.g., city or zip code), individuals are assigned to their mailing address county. A small number of individuals who report practicing within the state cannot be assigned to a county or to a zip code because their address information was invalid or insufficient. These individuals are included in the state counts, but are not included in county or region pages or the maps. See map footnotes to identify the number of individuals missing location information.

What is the time period for which health professionals are counted?

The time periods on which our workforce counts are based differ for each professional group. The license renewal process occurs on a biennial cycle (every two years) for some health professions, or annually for other health professions. Individuals are counted if they show an active status two months after their license expiration date. See **Table 1** for the effective date for each profession included in this report.

License expiration, or lapse, date: Each profession has a specified period during which they may renew their license. If an individual does not renew their license by a certain date, the license lapses and they may not practice until they are reinstated or obtain a new license. For all professions except for dentists and dental hygienists, this date coincides with the end of the license renewal period. The license expiration date for dentists and dental hygienists is set for two months after the posted renewal period.

³ For additional information, see https://www.ncsbn.org/2018MilitaryFactsheetFINAL.pdf and https://public-inspection.federalregister.gov/2020-24817.pdf.

⁴ For more information, refer to the National Council of State Boards of Nursing at https://www.ncsbn.org/compacts.htm.

Post-lapse date: To account for late renewals and potential delays in administrative processing, data provided for this report and all other SCOHW analyses are generated two months after the license lapse date, or "two months post-lapse." Because nurse licenses expire on April 30 in each renewal year, and because of the volume of new applications for licensure from nursing graduates in May, only nurses who held a license at the time of renewal and have an active license two months post-lapse are included; new nurse licenses processed during this period are excluded from the analysis file.

Because different professions renew their licenses at different times, it is not possible to produce a true 'snapshot' of the healthcare workforce in South Carolina at any single point in time. Also, because licensee information is updated on a biennial cycle for the majority of health professions, it is difficult to get a truly accurate count of the workforce since people are both entering and leaving the workforce over that two-year time period. The true supply and distribution of the health workforce will be most accurate just after each profession's renewal period closes.

Table 1. Effective Date of Health Professions Data, South Carolina, 2018-2020*

| Profession | Renewal Frequency | Effective Date | Effective Date, 2020 Nurses |
|---|-------------------|-------------------|-----------------------------|
| Physicians | Biennial | September 1, 2019 | |
| Registered Nurses (RNs)** | Biennial | July 1, 2018 | December 1, 2020 |
| Certified Nurse Midwives (CNMs)** | Biennial | July 1, 2018 | December 1, 2020 |
| Certified Registered Nurse Anesthetists (CRNAs)** | Biennial | July 1, 2018 | December 1, 2020 |
| Clinical Nurse Specialists (CNSs)** | Biennial | July 1, 2018 | December 1, 2020 |
| Nurse Practitioners (NPs)** | Biennial | July 1, 2018 | December 1, 2020 |
| Licensed Practical Nurses (LPNs)** | Biennial | July 1, 2018 | December 1, 2020 |
| Dental Hygienists | Biennial | May 1, 2019 | |
| Dentists | Biennial | May 1, 2019 | |
| Occupational Therapists (OTs) | Biennial | June 1, 2019 | |
| Occupational Therapy Assistants (OTAs) | Biennial | June 1, 2019 | |
| Optometrists | Biennial | March 1, 2019 | |
| Pharmacists | Annual | July 1, 2019 | |
| Pharmacy Technicians | Annual | September 1, 2019 | |
| Physical Therapists (PTs) | Biennial | March 1, 2019 | |
| Physical Therapist Assistants (PTAs) | Biennial | March 1, 2019 | |
| Physician Assistants (PAs) | Biennial | March 1, 2020 | |
| Psychologists | Biennial | February 1, 2020 | |
| Respiratory Care Practitioners | Biennial | August 1, 2019 | |
| Clinical Social Workers | Biennial | March 1, 2019 | |

*Note: For professions that renew at the end of the year, the post-lapse data file is generated in the next calendar year. For example, the PA renewal period ended 12/31/2019, but the date on which the file was generated post-lapse is 3/1/2020. In previous reports, PAs were reported for their renewal date ending in odd years (i.e., 2017) instead of for their post-lapse date (i.e., 2018). While the time between renewal periods did not change, this report attempts to clarify the effective dates for accuracy. This should be noted for longitudinal analyses. **The 2020 renewal period for nurses was extended through 9/30/2020; the post-lapse date is effective 12/1/2020; and includes data cleaning and processing by RFA-HDD through 10/19/2021.

Limitations of Health Professions Data

The inclusion and exclusion criteria used in this report, combined with the timing of renewal periods across professions, may produce a conservative count of the healthcare workforce at any given time. Additional considerations include:

- New licensees who have moved into South Carolina from another state or are new graduates receiving their initial license to
 practice in South Carolina may not be required to report their employment or practice status in their initial license application.
 Depending on when a new licensee receives their initial license to practice, they may be a productive part of the workforce for
 as many as two years before they complete their first license renewal and are reflected in official workforce counts.
- Established healthcare providers retire, die, move or otherwise leave practice in between renewal cycles.
- Federal health professionals who hold a license in South Carolina may provide care to civilians outside of the federal system in a secondary practice setting or employment arrangement but are not captured in our counts.
- Because we are unable to count eNLC nurses with a license from a different home state, we are likely underestimating the number of nurses working within South Carolina.
- We report headcount based on primary practice location, or mailing address if practice location is missing. This may not accurately reflect the availability of health professionals by county, because it does not account for individuals who practice in multiple locations (e.g., working in Richland County 3 days a week and Fairfield County 2 days a week) or those that work part time. The tables showing primary and secondary practice sites by county (page 149) help describe this additional availability and distribution.

Other Data Sources

Population Data Source

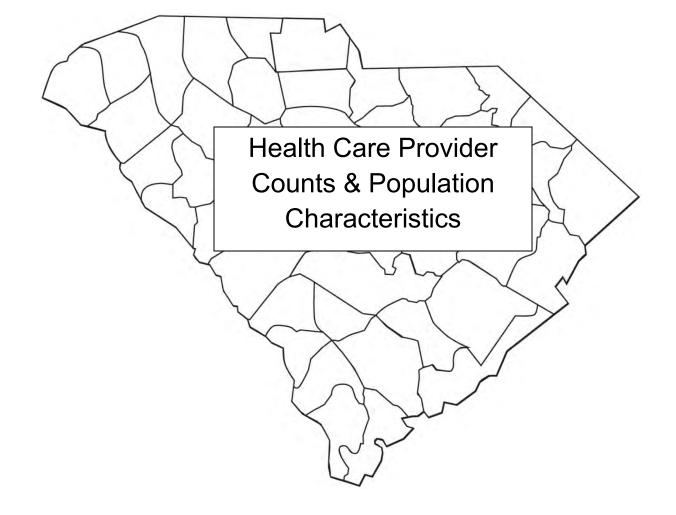

Information on area population by age and race is from the U.S. Census Bureau 2019 bridged race post-census estimates released by the National Center for Health Statistics. County-level age and race summary tables were provided by the Health and Demographics Division of the Revenue and Fiscal Affairs Office. Regional aggregates were created by the South Carolina Office for Healthcare Workforce staff.

Demographic, Health Facility, and Economic Data

This publication includes information on different types of health status in the population – vital statistics such as births, deaths and pregnancies; hospital and nursing home beds; hospital discharges within resident's home county; and socio-economic indicators such as unemployment, education, income, and insurance coverage. Definitions of each statistic and its source can be found in *Appendix I: Data Definitions and Sources*.

In addition to reporting information at the county level, data have been aggregated into regional summaries. There are several different regional definitions included in this book that are used by one or more governmental agencies for planning or program implementation purposes. These include AHEC service areas, DHEC Environmental Affairs regions, perinatal regions, and workforce development areas. We also include two different definitions of the rural and urban areas of our state. The county listing, definition, and source for each regional categorization can be found in *Appendix II: Regional Definitions*.

Understanding the Healthcare Provider Maps

The healthcare provider maps in this section show how the healthcare professionals enumerated¹ in the book are distributed across the state. Nurse maps are included for 2020; nurse maps for 2018 are available upon request. There are two types of maps.

- **Dot density maps** show the distribution of each health profession by self-reported primary practice location.
 - o One dot represents one individual.
 - o The dots are based on primary practice location zip code, or on office or mailing zip code if primary practice address is missing.²
 - o Dots are randomly scattered within the zip code area (boundaries not shown) and may not represent the actual street address of the practice. Zip code areas may cross county boundaries.
- **Shaded county maps** show the ratio of each health profession relative to population, by county, calculated as the number of health professionals in the county divided by the county's population and multiplied by 10,000.
 - o Calculating ratios allows us to adjust for differences in population and compare the relative availability of health professionals across geographic areas in this case, counties in South Carolina.
 - o This ratio is a nationally recognized standard and provides comparability to national and other state data. It is also sometimes calculated per 1,000 or 100,000 population.
 - NOTE: In this report, ratios of obstetrician-gynecologists (Ob/Gyns), certified nurse midwives (CNMs), and pediatricians are calculated differently from previous editions of the South Carolina Health Professions Data Book.
 - Ob/Gyns and CNMs are calculated relative to women of childbearing age (15-44) instead of total population.
 While women of other ages are not reflected in this map, it is important to recognize that Ob/Gyns provide care to women of all ages in addition to delivering babies.
 - Pediatricians are calculated relative to children age 0-17, as other national organizations report in their data.^{3,4}
 - These changes in calculating ratios of Ob/Gyns, CNMs, and pediatricians differ from previous Data Books. Caution should be used in comparing data to previous years.
 - The data ranges in the map legend are designed to be intuitive and consistent across most professions. Larger professions, such as registered nurses, total physicians, and pharmacy technicians, required higher ranges. Please note the ranges when reviewing each map.
 - o At the right of each data range is a number in parentheses. This number indicates the number of counties in that data range. All data ranges are shown in the legend, though there may not be any counties in that range for certain professions.

¹ Detailed notes on how health professionals are counted can be found in the introductory text on page 2.

² A small number of individuals who report practicing within the state cannot be assigned to a county or to a zip code because their address information was invalid or insufficient. These individuals are included in the state counts, but are not included in county or region pages or the maps. The footnotes of each map will show the number of individuals missing sufficient location information, if any.

Rural counties are those counties where 50% or more of the population lives outside an urbanized area, based on the 2010 Census counts.

General Pediatricians per 10,000 Population Age 0-17* South Carolina, 2019

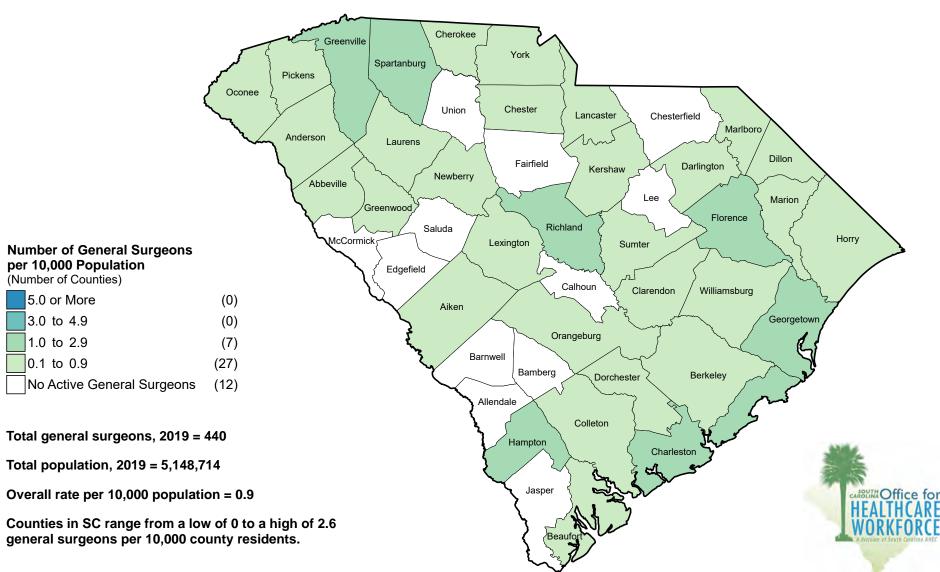

This information is based on all physicians with a primary specialty of pediatrics that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location and include residents-in-training. Other pediatric specialties, such as pediatric cardiology or pediatric surgery, are excluded from these counts. *Note: This map differs from previous years by showing the number of pediatricians relative to the number of children ages 0-17 instead of total population.

General Surgeons by Primary Practice Location South Carolina, 2019

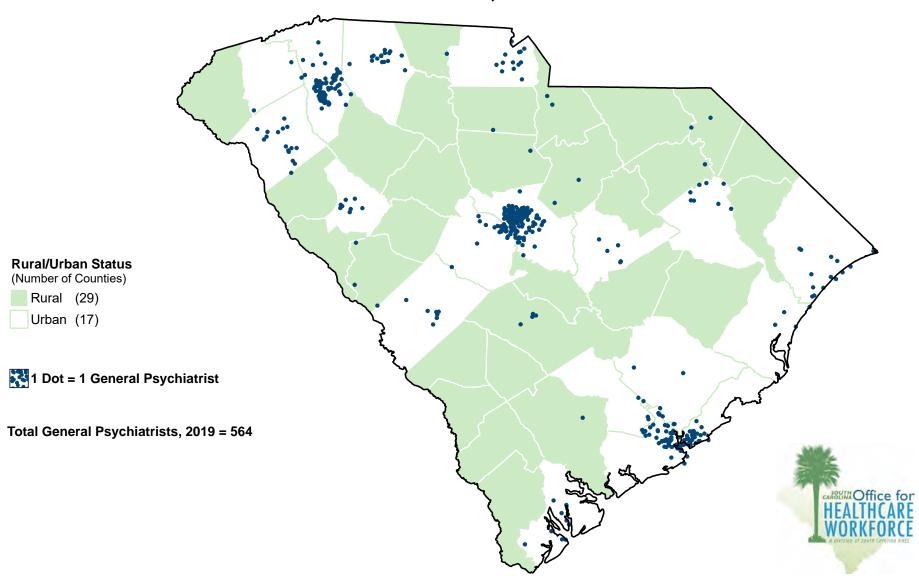

This information is based on all physicians with a primary specialty of general surgery that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location and include residents-in-training. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice.

General Surgeons per 10,000 Population South Carolina, 2019

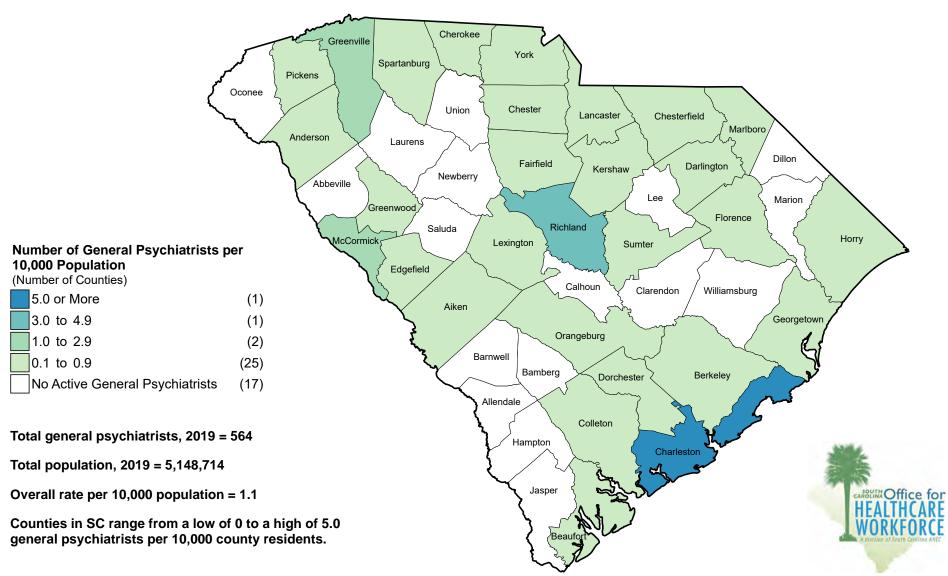

This information is based on all physicians with a primary specialty of general surgery that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location and include residents-in-training.

General Psychiatrists by Primary Practice Location South Carolina, 2019

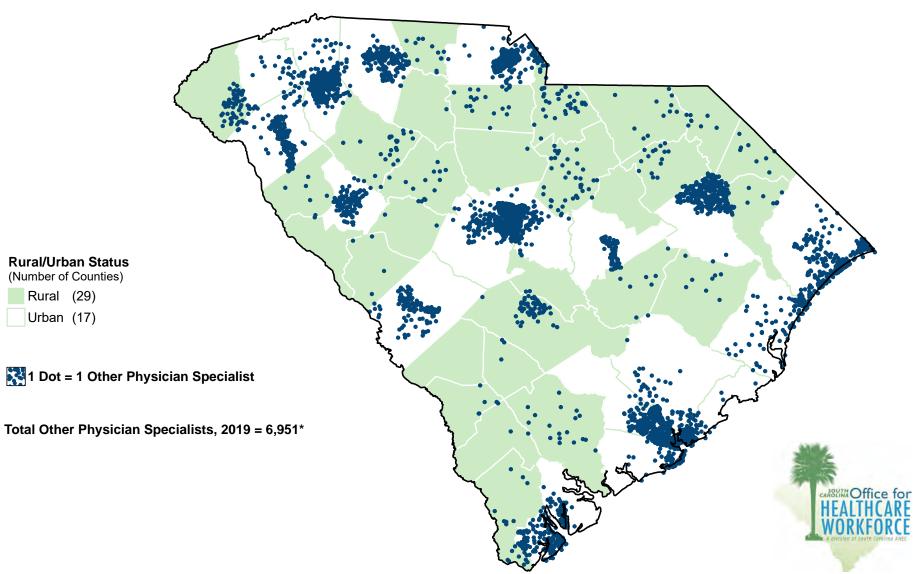

This information is based on all physicians with a primary specialty of psychiatry that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location and include residents-in-training. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. Counts do not include psychiatry sub-specialties.

General Psychiatrists per 10,000 Population South Carolina, 2019

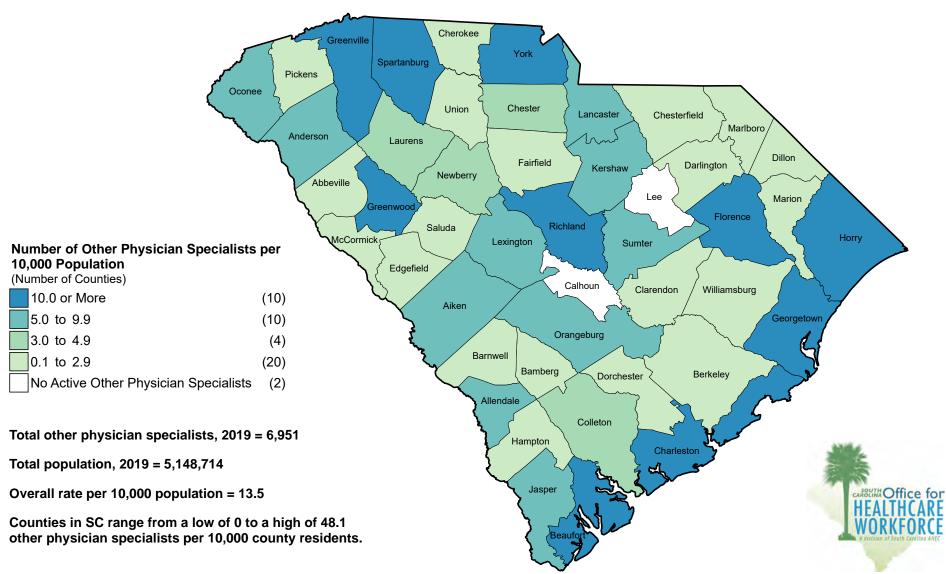

This information is based on all physicians with a primary specialty of psychiatry that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location and include residents-in-training. Other psychiatry specialties, such as child psychiatry and forensic psychiatry, are excluded from these counts.

Other Physician Specialists by Primary Practice Location South Carolina, 2019

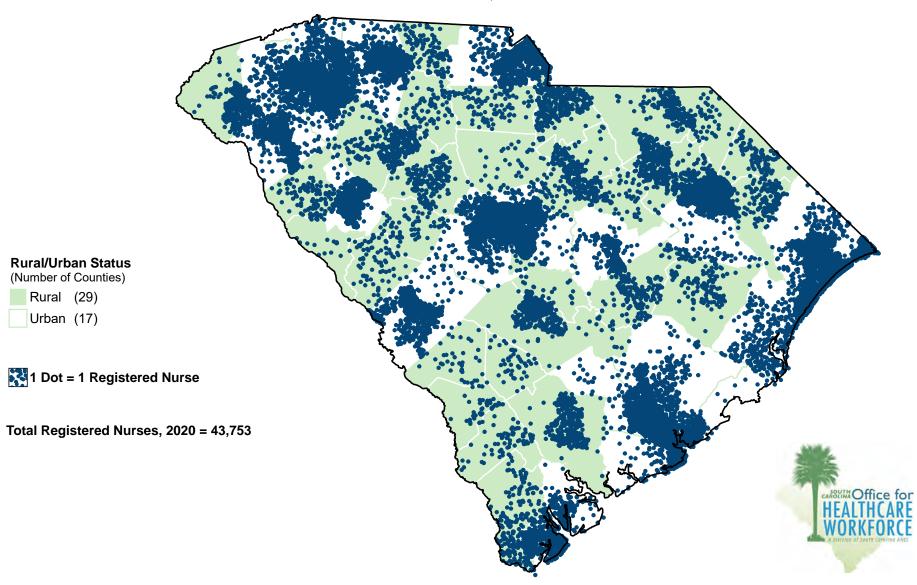

This information is based on all physicians with a primary specialty other than family medicine, internal medicine, obstetrics/gynecology, pediatrics, general surgery or psychiatry that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location and include residents-in-training. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. *This map omits 3 physicians who did not have a valid South Carolina zip code.

Other Physician Specialists per 10,000 Population South Carolina, 2019

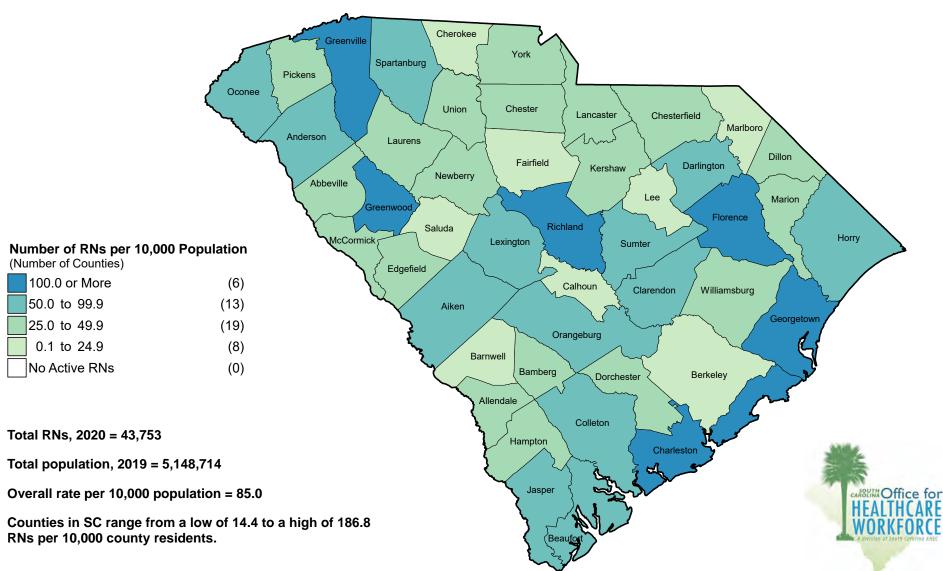

This information is based on all physicians with a primary specialty other than family medicine, general internal medicine, obstetrics/gynecology, pediatrics, general surgery or psychiatry that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location and include residents-in-training.

Registered Nurses (RNs) by Primary Practice Location South Carolina, 2020

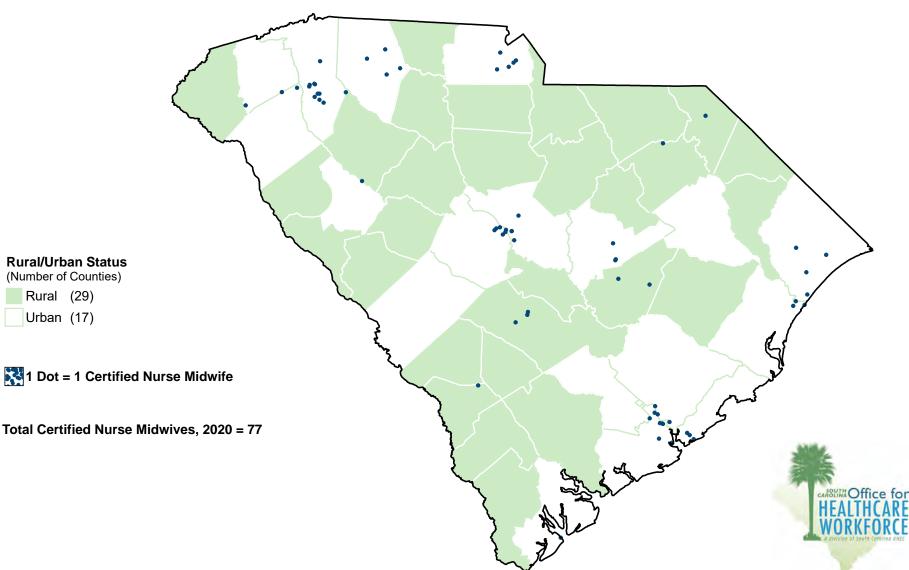

This information is based on all registered nurses with an active license to practice and a primary practice location in South Carolina as of 12/1/2020. Counts are based on self-reported primary practice location or mailing address if practice address was missing, and exclude RNs with approval to practice as an advanced practice registered nurse. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice.

Registered Nurses (RNs) per 10,000 Population South Carolina, 2020

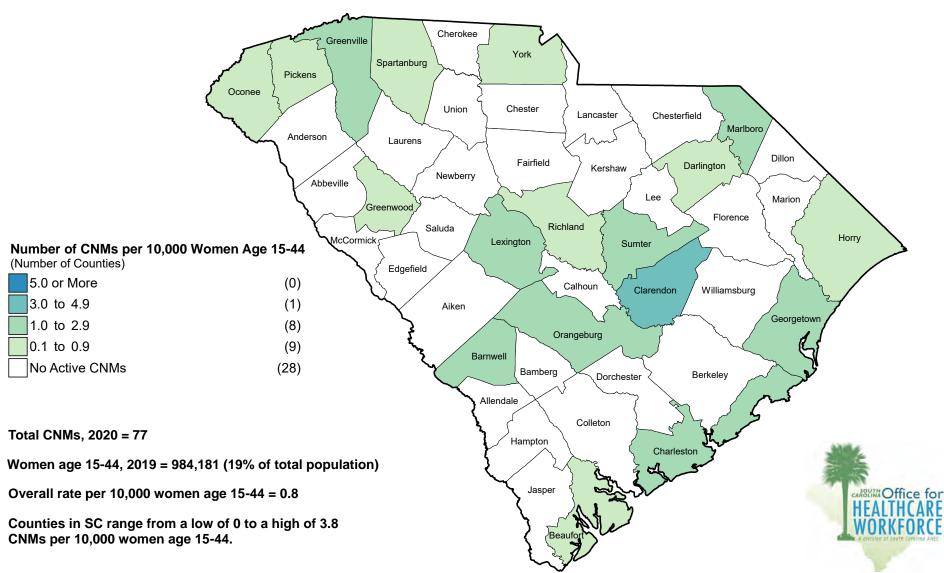

This information is based on all registered nurses with an active license to practice and a primary practice location in South Carolina as of 12/1/2020. Counts are based on self-reported primary practice location or mailing address if practice address was missing, and exclude RNs with approval to practice as an advanced practice registered nurse. Certified Registered Nurse Anesthetists (CRNAs) by Primary Practice Location South Carolina, 2020

This information is based on all certified registered nurse anesthetists (CRNAs) with an active license to practice and a primary practice location in South Carolina as of 12/1/2020. Counts are based on self-reported primary practice location or mailing address if practice address was missing. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice.

Certified Registered Nurse Anesthetists (CRNAs) per 10,000 Population South Carolina, 2020

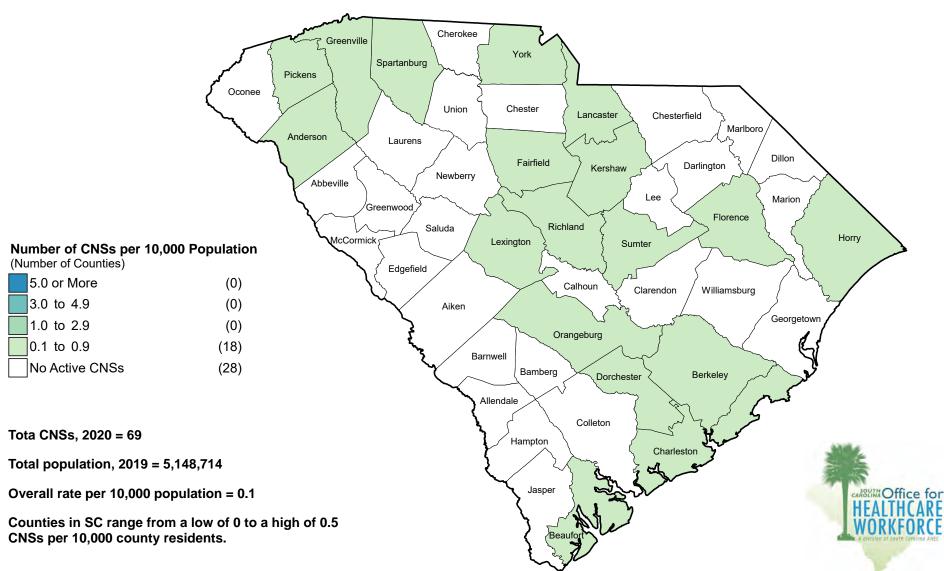

This information is based on all certified registered nurse anesthetists (CRNAs) with an active license to practice and a primary practice location in South Carolina as of 12/1/2020. Counts are based on self-reported primary practice location or mailing address if practice address was missing.

Clinical Nurse Specialists (CNSs) by Primary Practice Location South Carolina, 2020

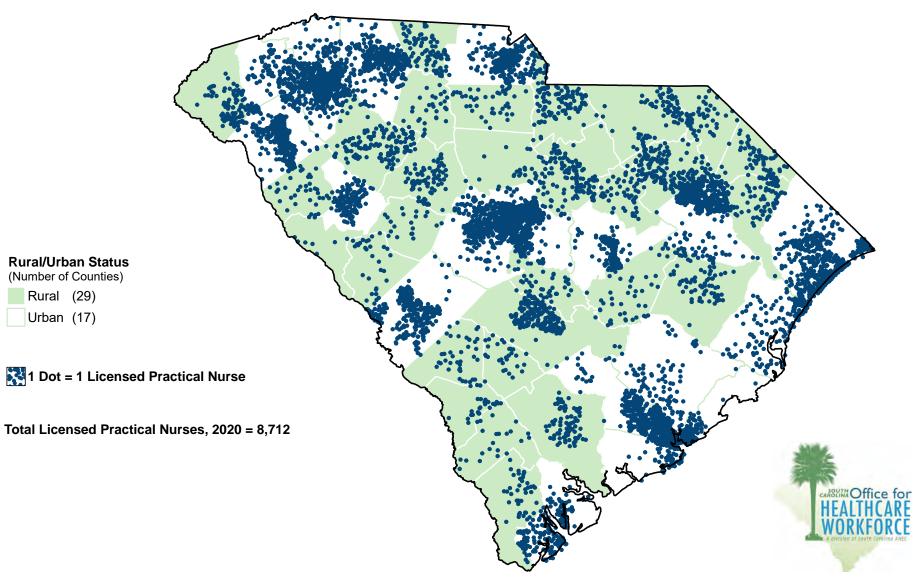

This information is based on all clinical nurse specialists with an active license to practice and a primary practice location in South Carolina as of 12/1/2020. Counts are based on self-reported primary practice location, or mailing address if practice address was missing. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice.

Clinical Nurse Specialists (CNSs) per 10,000 Population South Carolina, 2020

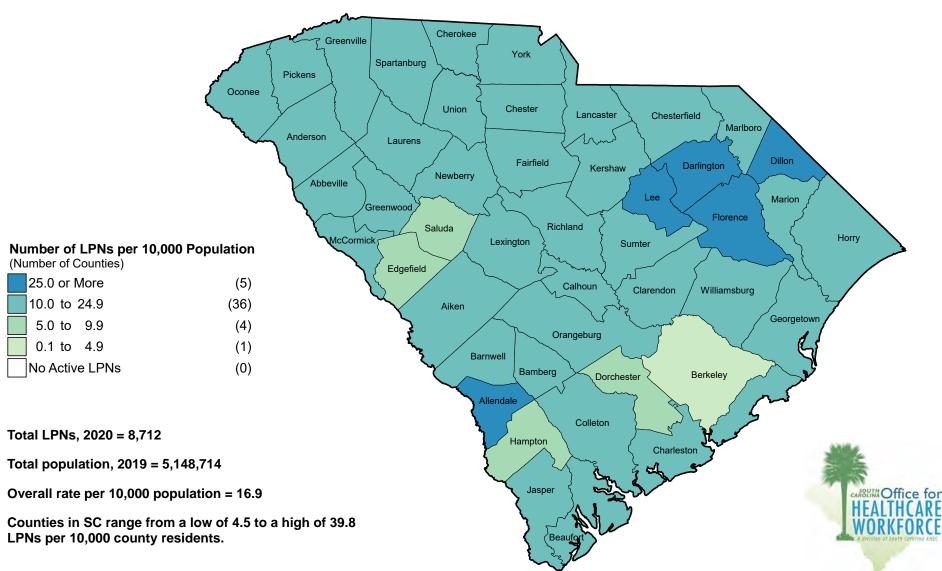

This information is based on all clinical nurse specialists with an active license to practice and a primary practice location in South Carolina as of 12/1/2020. Counts are based on self-reported primary practice location or mailing address if practice address was missing.

Licensed Practical Nurses (LPNs) by Primary Practice Location South Carolina, 2020

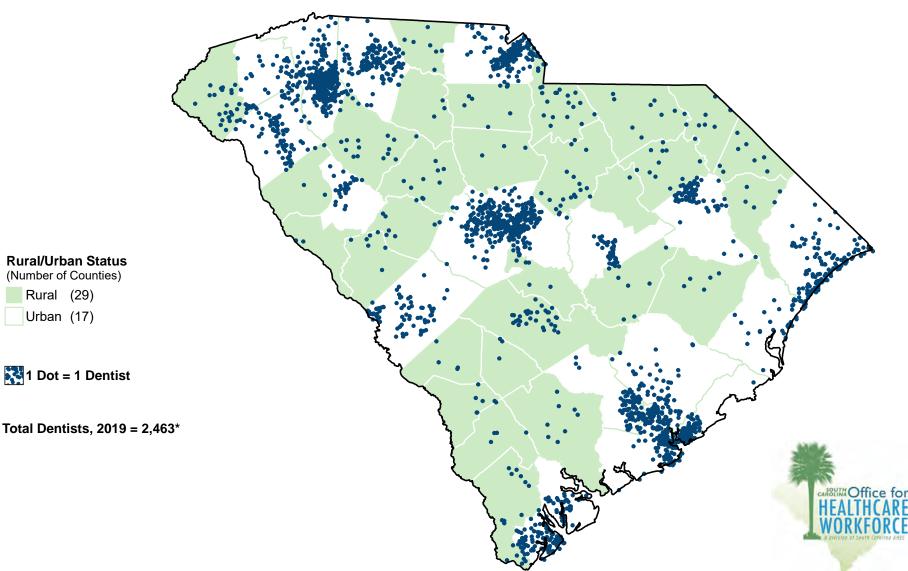

This information is based on all licensed practical nurses (LPNs) with an active license to practice and a primary practice location in South Carolina as of 12/1/2020. Counts are based on self-reported primary practice location or mailing address if practice address was missing. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice.

Licensed Practical Nurses (LPNs) per 10,000 Population South Carolina, 2020

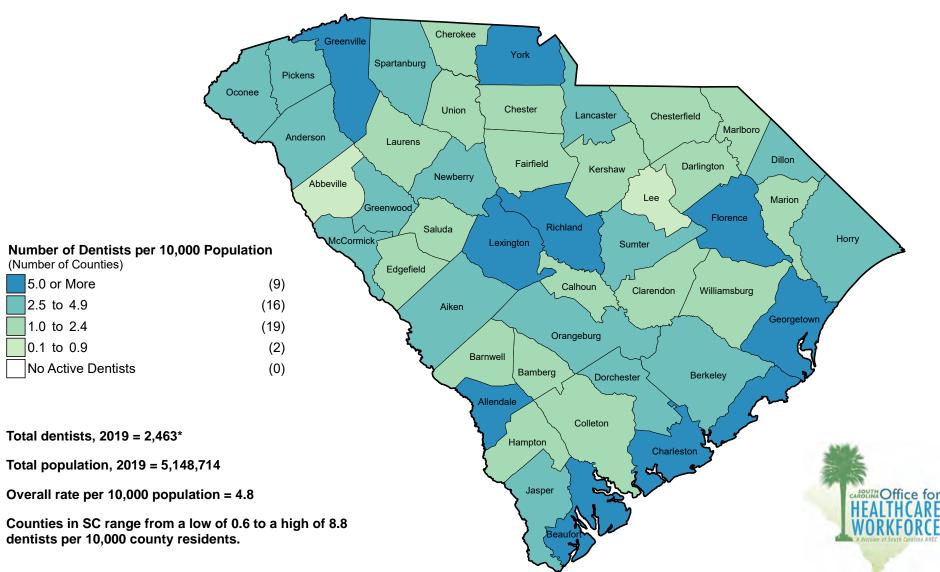

This information is based on all licensed practical nurses (LPNs) with an active license to practice and a primary practice location in South Carolina as of 12/1/2020. Counts are based on self-reported primary practice location or mailing address if practice address was missing.

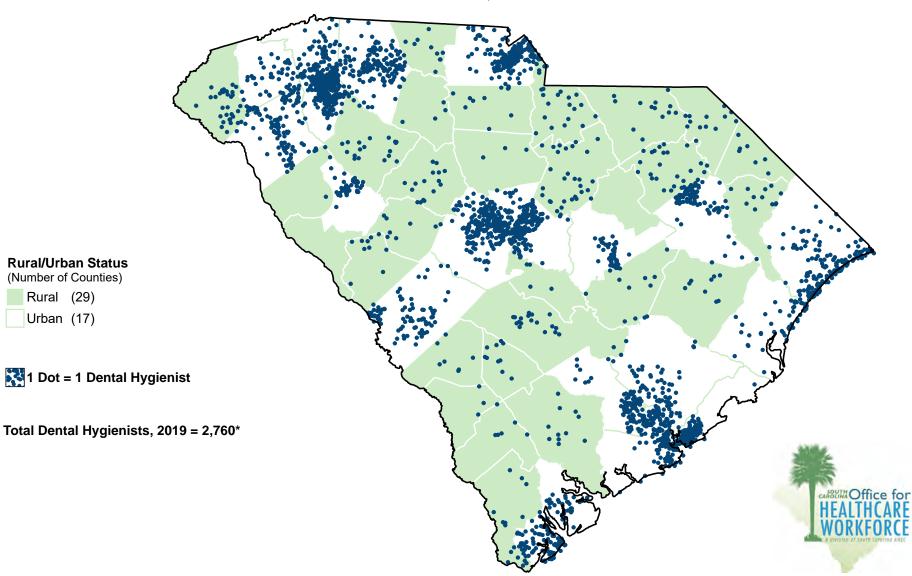

This information is based on all dentists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 5/1/2019. Counts are based on self-reported primary practice location. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. *This map omits 1 dentist who did not have a valid South Carolina zip code.

Dentists per 10,000 Population South Carolina, 2019

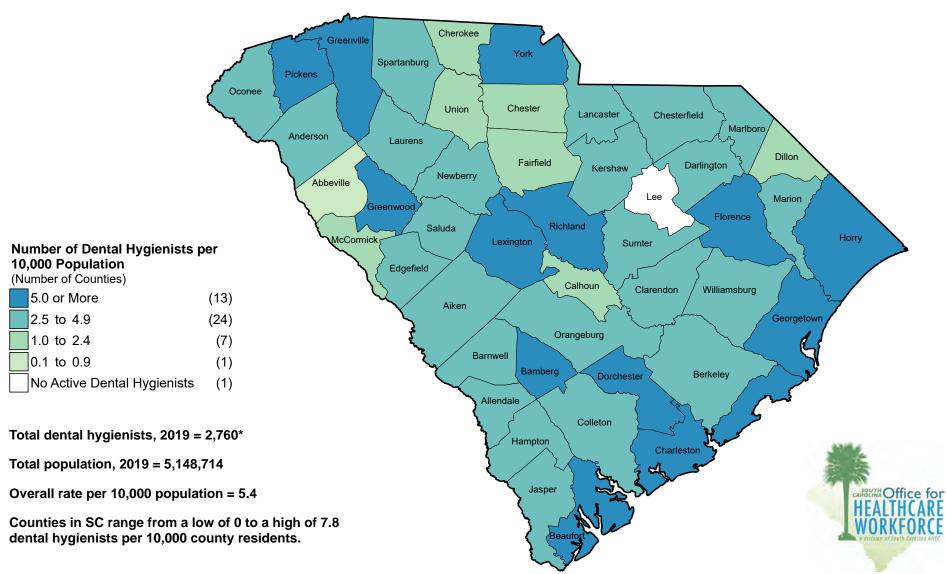

This information is based on all dentists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 5/1/2019. Counts are based on self-reported primary practice location. *Location information was missing for 1 dentist.

Dental Hygienists by Primary Practice Location South Carolina, 2019

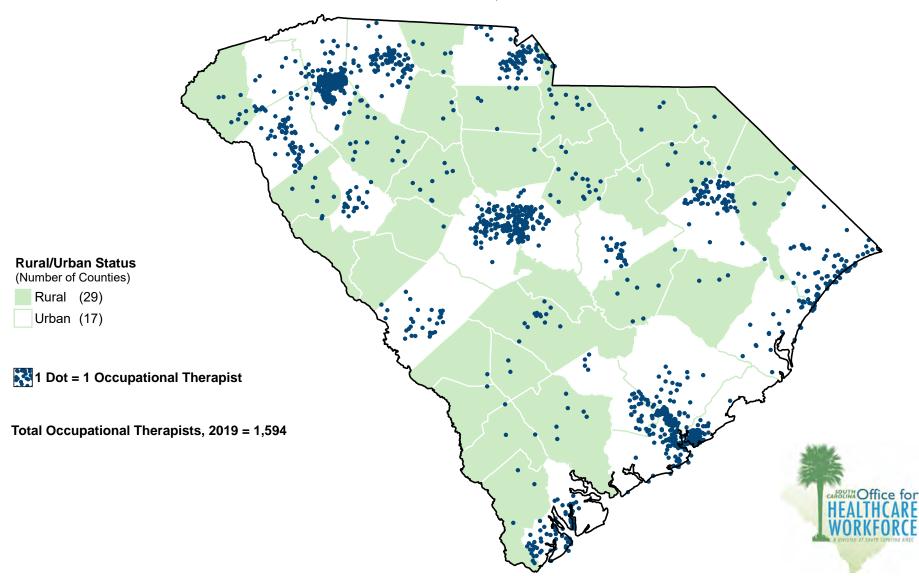

This information is based on all dental hygienists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 5/1/2019. Counts are based on self-reported primary practice location. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. *This map omits 6 dental hygienists who did not have a valid South Carolina zip code.

Dental Hygienists per 10,000 Population South Carolina, 2019

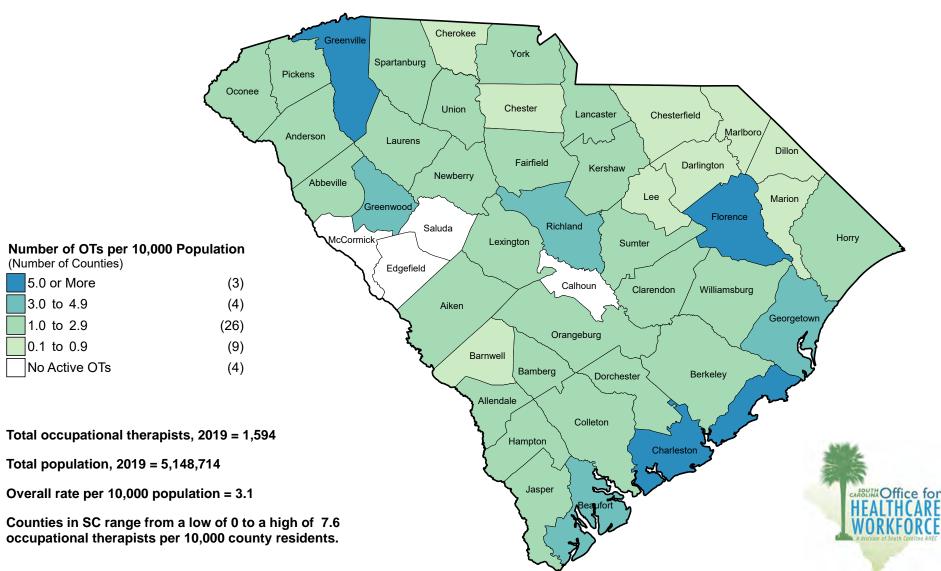

This information is based on all dental hygienists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 5/1/2019. Counts are based on self-reported primary practice location. *Location information was missing for 6 dental hygienists.

Occupational Therapists (OTs) by Primary Practice Location South Carolina, 2019

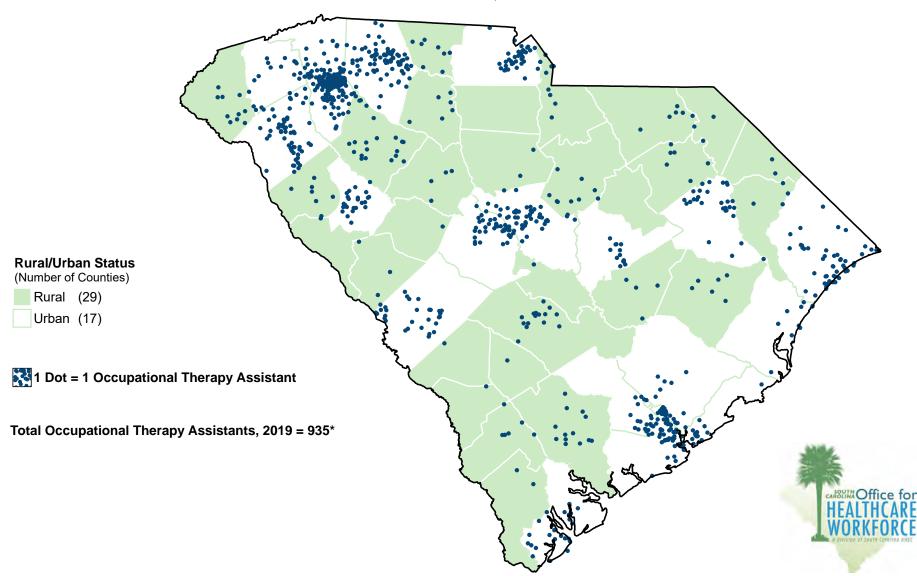

This information is based on all occupational therapists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 6/1/2019. Counts are based on self-reported primary practice location or mailing address if practice address was missing. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice.

Occupational Therapists (OTs) per 10,000 Population South Carolina, 2019

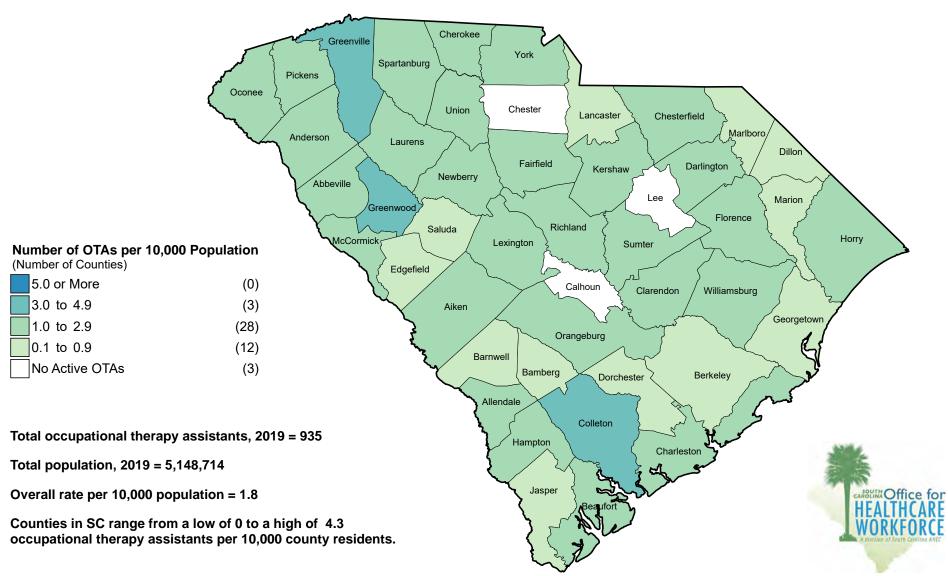

This information is based on all occupational therapists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 6/1/2019. Counts are based on self-reported primary practice location or mailing address if practice address is missing.

Occupational Therapy Assistants (OTAs) by Primary Practice Location South Carolina, 2019

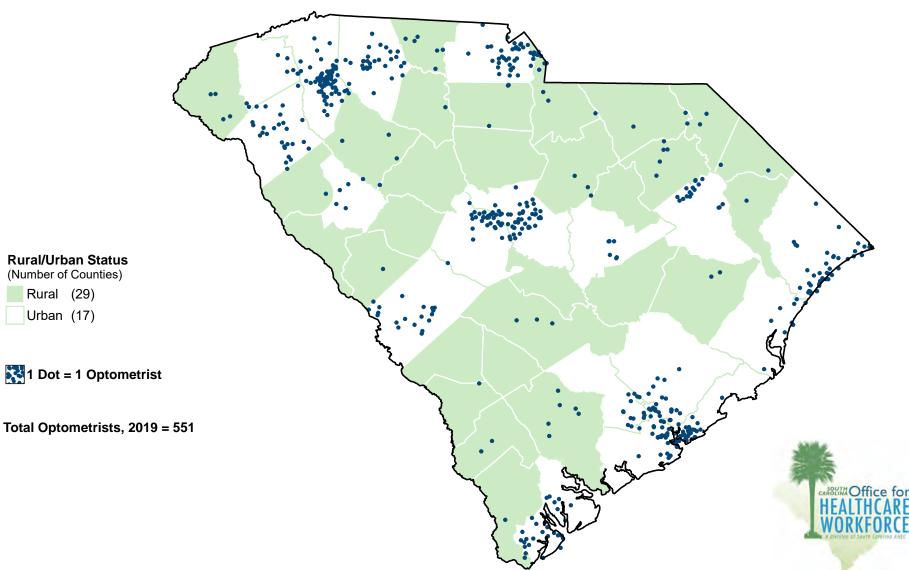

This information is based on all occupational therapy assistants with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 6/1/2019. Counts are based on self-reported primary practice location. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. *This map omits 2 occupational therapy assistants who did not have a valid South Carolina zip code.

Occupational Therapy Assistants (OTAs) per 10,000 Population South Carolina, 2019

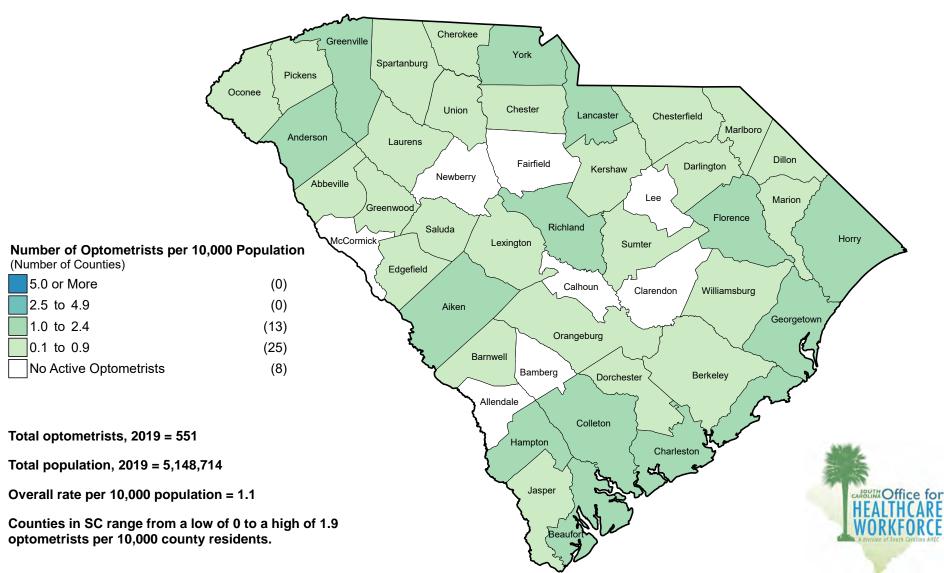

This information is based on all occupational therapy assistants with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 6/1/2019. Counts are based on self-reported primary practice location.

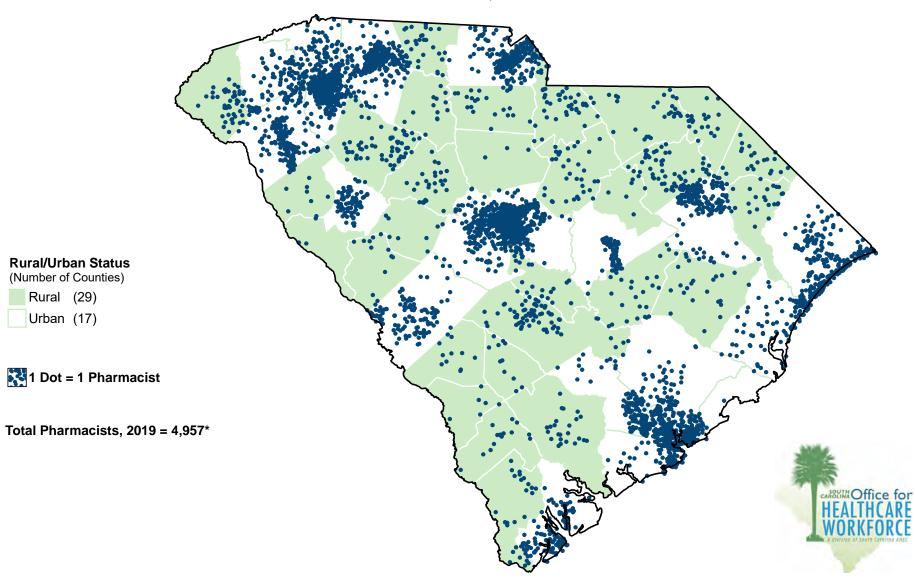

This information is based on all optometrists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 3/1/2019. Counts are based on self-reported primary practice location. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. Source: South Carolina Office for Healthcare Workforce, SC AHEC, with data collected by the SC Department of Labor, Licensing and Regulation and obtained from the Revenue and Fiscal Affairs Office. Rural definition from the U.S. Census Bureau, Geography Division, https://www.census.gov/programs-surveys/geography/guidance/geo-areas/urban-rural/2010-urban-rural.html. Rural counties are those counties where 50% of more of the population lives outside an urbanized area, based on the 2010 Census counts.

Optometrists per 10,000 Population South Carolina, 2019

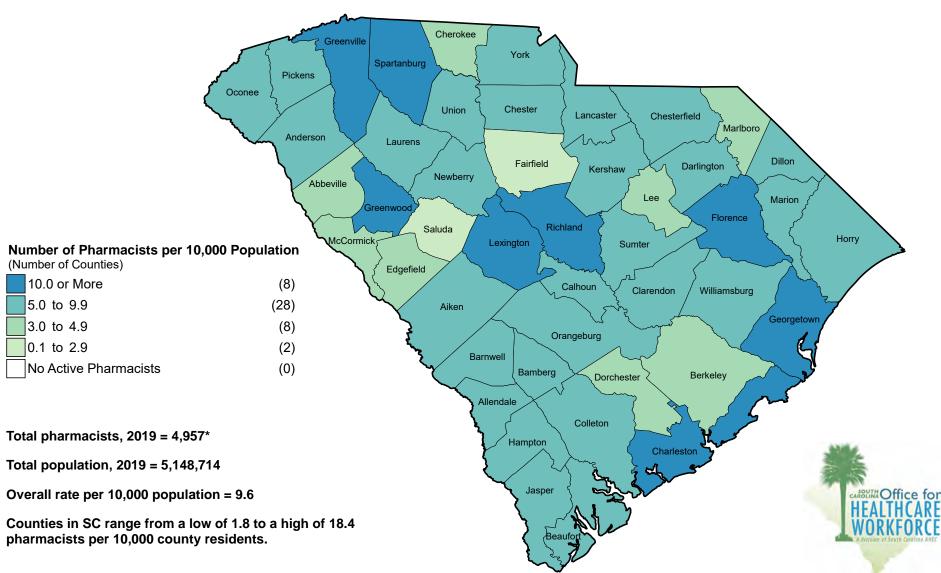

This information is based on all optometrists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 3/1/2019. Counts are based on self-reported primary practice location.

Pharmacists by Primary Practice Location South Carolina, 2019

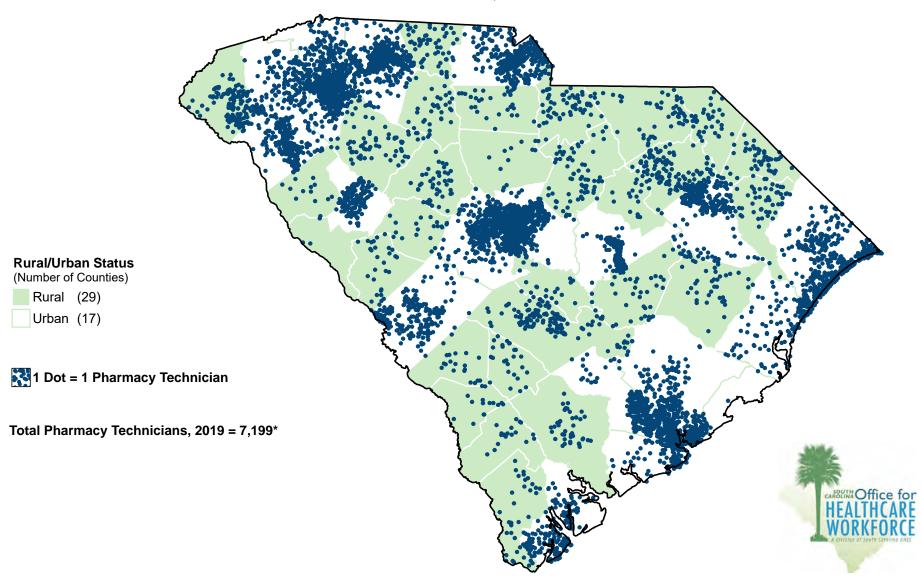

This information is based on all pharmacists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 7/1/2019. Counts are based on self-reported primary practice location. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. *This map omits 8 pharmacists who did not have a valid South Carolina zip code.

Pharmacists per 10,000 Population South Carolina, 2019

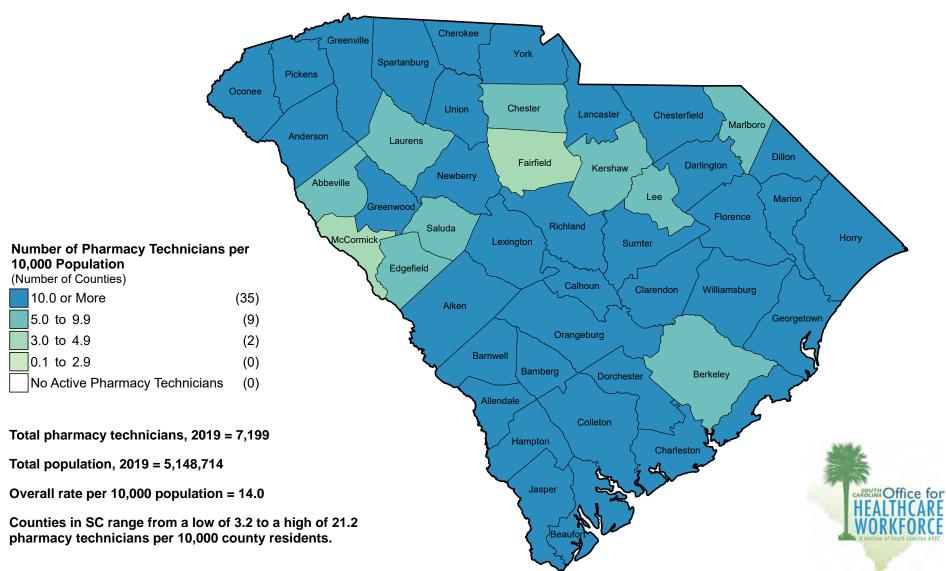

This information is based on all pharmacists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 7/1/2019. Counts are based on self-reported primary practice location. *Location information was missing for 2 pharmacists.

Pharmacy Technicians by Primary Practice Location South Carolina, 2019

This information is based on all pharmacy technicians with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. *This map omits 1 pharmacy technician who did not have a valid South Carolina zip code.

Pharmacy Technicians per 10,000 Population South Carolina, 2019

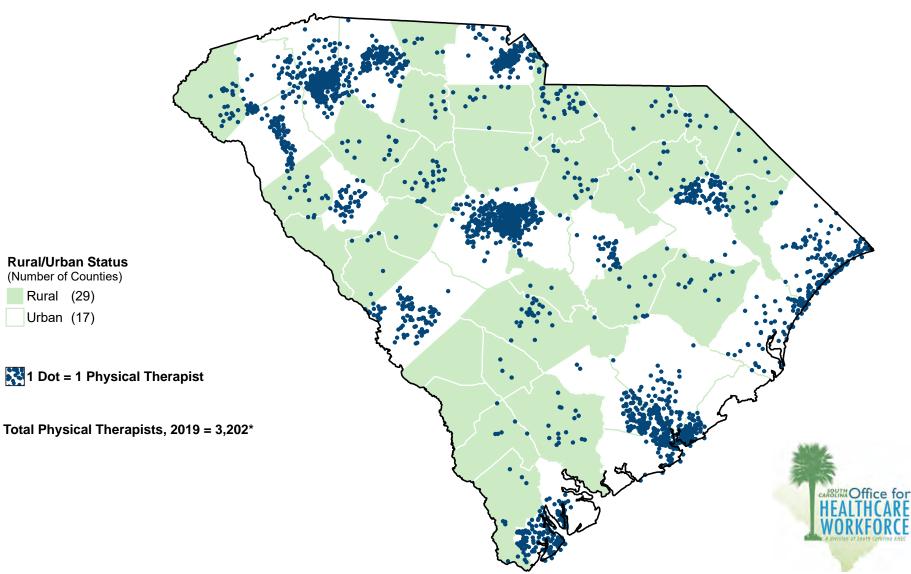

This information is based on all pharmacy technicians with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2019. Counts are based on self-reported primary practice location.

Clinical Social Workers by Primary Practice Location South Carolina, 2019

This information is based on all social workers with an active license to practice, a license designation of LISW-Clinical Practice, LISW-Advanced Practice, LISW-Dual, or LMSW (only LMSWs employed in non-profit agencies, government agencies, or health delivery facilities such as hospitals and hospice) and a primary practice location in a nonfederal setting in South Carolina as of 3/1/2019. Counts are based on self-reported primary practice location or mailing address if practice address was missing. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. *This map omits 1 clinical social worker who did not have a valid South Carolina zip code. Source: South Carolina Office for Healthcare Workforce, SC AHEC, with data collected by the SC Department of Labor, Licensing and Regulation and obtained from the Revenue and Fiscal Affairs Office. Rural definition from the U.S. Census Bureau, Geography Division, https://www.census.gov/programs-surveys/geography/guidance/geo-areas/urbanrural/2010-urban-rural.html. Rural counties are those counties where 50% or more of the population lives outside an urbanized area, based on the 2010 Census counts.

Clinical Social Workers per 10,000 Population South Carolina, 2019

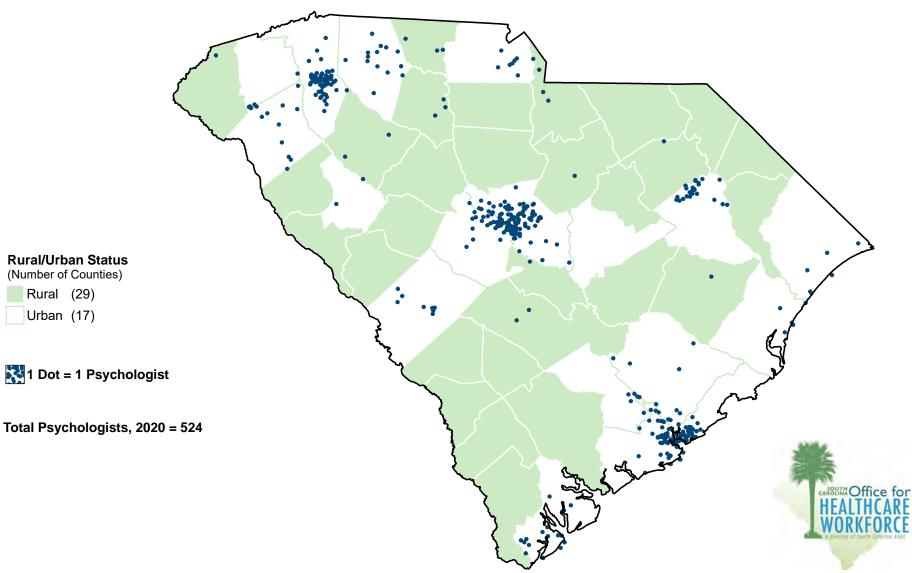

This information is based on all social workers with an active license to practice, a license designation of LISW-Clinical Practice, LISW-Advanced Practice, LISW-Dual, or LMSW (includes only LMSWs employed in non-profit agencies, government agencies, or health delivery facilities such as hospitals and hospice), and a primary practice location in a nonfederal setting in South Carolina as of 3/1/2019. Counts are based on self-reported primary practice location or mailing address if practice address is missing. *Location information was missing for 1 social worker.

Total Number of Physicians Reporting Primary or Secondary Practice Sites by County, 2019

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|
| Abbeville | 18 | 12 |
| Aiken | 287 | 15 |
| Allendale | 11 | 6 |
| Anderson | 391 | 40 |
| Bamberg | 8 | 8 |
| Barnwell | 8 | 6 |
| Beaufort | 416 | 29 |
| Berkeley | 72 | 36 |
| Calhoun | 1 | 0 |
| Charleston | 3,212 | 39 |
| Cherokee | 43 | 8 |
| Chester | 26 | 7 |
| Chesterfield | 29 | 16 |
| Clarendon | 30 | 10 |
| Colleton | 44 | 38 |
| Darlington | 67 | 17 |
| Dillon | 28 | 2 |
| Dorchester | 142 | 38 |
| Edgefield | 8 | 11 |
| Fairfield | 11 | 8 |
| Florence | 490 | 33 |
| Georgetown | 195 | 26 |
| Greenville | 2,113 | 72 |

This table includes both the number of physicians who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 9/1/2019. Physicians can report up to 3 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second or third practice county location. Note that this is a count of physicians practicing within the county, including those in residency training programs, not a count of practice sites.

Primary Care Physicians Reporting Primary or Secondary Practice Sites by County, 2019

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|

| Greenville | 1,129 | 43 | York | York 392 |

This table includes the number of specialist physicians who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 9/1/2019. The figures include physicians who reported their specialty as anything other than family medicine, general internal medicine, obstetrics, gynecology, general pediatrics, general psychiatry or general surgery. Physicians can report up to 3 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second or third practice county location. Note that this is a count of physicians practicing within the county, including those in residency training programs, not a count of practice sites.

Registered Nurses (RNs) Reporting Primary or Secondary Practice Sites by County, 2020

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|
| Abbeville | 107 | 16 |
| Aiken | 906 | 32 |

| Sumter | 740 | 54 |
| Union | 87 | 12 |
| Williamsburg | 1,273 | 29 |
| York | 108 | 18 |

This table includes the number of registered nurses (RNs) who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 12/1/2020. The numbers do not include advanced practice registered nurses (NPs, CNMs, CRNAs, CNSs). Nurses can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county based first on their self-reported primary practice county or street address; if primary practice county and street address were unknown, self-reported mailing address county was used. Assignment to a secondary practice county was based on self-reported second practice county location. Note that this is a count of RNs practicing within the county, not a count of practice sites.

Certified Nurse Midwives (CNMs) Reporting Primary or Secondary Practice Sites by County, 2020

| Georgetown | 2 | 0 |
| Greenville | 11 | 0 |

This table includes the number of certified nurse midwives (CNMs) who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 12/1/2020. Nurses can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county based first on their self-reported primary practice county or street address; if primary practice county and street address were unknown, self-reported mailing address county was used. Assignment to a secondary practice county was based on self-reported second practice county location. Note that this is a count of CNMs practicing within the county, not a count of practice sites.

Nurse Practitioners (NPs) Reporting Primary or Secondary Practice Sites by County, 2020

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|
| Abbeville | 10 | 1 |
| Aiken | 98 | 5 |

| Darlington | 199 | 20 |
| Dillon | 78 | 6 |
| Dorchester | 158 | 18 |
| Edgefield | 25 | 2 |
| Fairfield | 37 | 2 |
| Florence | 564 | 35 |
| Georgetown | 123 | 7 |
| Greenville | 856 | 37 |

This table includes the number of licensed practical nurses (LPNs) who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 7/1/2018. Nurses can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county location based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported secondary practice county location. Note that this is a count of LPNs practicing within the county, not a count of practice sites. Three LPNs could not be assigned to a primary practice county because no practice information was available.

Dentists Reporting Primary or Secondary Practice Sites by County, 2019

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|
| Abbeville | 2 | 1 |
| Aiken | 70 | 4 |
| Allendale | 6 | 4 |
| Anderson | 86 | 17 |
| Bamberg | 3 | 1 |
| Barnwell | 5 | 2 |

| Union | 3 | 3 |
| Williamsburg | 7 | 3 |
| York | 147 | 6 |

This table includes the number of dentists who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 5/1/2019. Dentists can report up to 4 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second, third or fourth practice county location. Note that this is a count of dentists practicing within the county, not a count of practice sites. One dentist could not be assigned to a county because no practice location information was available.

Dental Hygienists Reporting Primary or Secondary Practice Sites by County, 2019

| County | # whose primary practice is in this county | # who have a secondary practice in this county | County | # whose primary practice County is in this county |
|--------------|--|--|--------------|---|
| Abbeville | 1 | 1 | Greenwood | Greenwood 40 |

| Florence | 89 | 1 | Union | Union 4 |
| Georgetown | 37 | 2 | Williamsburg | Williamsburg 11 |
| Greenville | 397 | 7 | York | York 170 |

This table includes the number of dental hygienists who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 5/1/2019. Dental hygienists can report up to 4 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second, third or fourth practice county location. Note that this is a count of dental hygienists practicing within the county, not a count of practice sites. Six dental hygienists could not be assigned to a county because no practice location information was available.

Occupational Therapists (OTs) Reporting Primary or Secondary Practice Sites by County, 2019

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|

This table includes the number of physical therapists (PTs) who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 3/1/2019. PTs can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second practice county location. Note that this is a count of PTs practicing within the county, not a count of practice sites.

Physical Therapist Assistants (PTAs) Reporting Primary or Secondary Practice Sites by County, 2019

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|
| Abbeville | 8 | 1 |
| Aiken | 64 | 1 |
| Allendale | 1 | 0 |
| Anderson | 72 | 4 |
| Bamberg | 4 | 1 |
| Barnwell | 3 | 3 |
| Beaufort | 98 | 3 |
| Berkeley | 20 | 2 |
| Calhoun | 0 | 3 |
| Charleston | 215 | 3 |
| Cherokee | 20 | 3 |
| Chester | 5 | 0 |
| Chesterfield | 12 | 1 |
| Clarendon | 13 | 1 |
| Colleton | 23 | 1 |
| Darlington | 16 | 0 |
| Dillon | 5 | 0 |
| Dorchester | 35 | 3 |
| Edgefield | 3 | 1 |
| Fairfield | 4 | 1 |
| Florence | 93 | 9 |
| Georgetown | 33 | 1 |
| Greenville | 262 | 8 |

This table includes the number of physical therapist assistants (PTAs) who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 3/1/2019. PTAs can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second practice county location. Note that this is a count of PTAs practicing within the county, not a count of practice sites.

Physician Assistants (PAs) Reporting Primary or Secondary Practice Sites by County, 2020

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|
| Abbeville | 2 | 2 |
| Aiken | 41 | 2 |
| Allendale | 2 | 1 |
| Anderson | 26 | 1 |
| Bamberg | 2 | 0 |
| Barnwell | 5 | 0 |
| Beaufort | 68 | 5 |
| Berkeley | 23 | 6 |

| Dillon | 3 | 1 |
| Dorchester | 22 | 3 |
| Edgefield | 2 | 0 |
| Fairfield | 1 | 0 |
| Florence | 38 | 0 |
| Georgetown | 17 | 2 |
| Greenville | 181 | 8 |

This table includes both the number of physician assistants (PAs) who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 3/1/2020. Physician assistants can report up to 3 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county. Assignment to a secondary practice county was based on self-reported second or third practice county location. Note that this is a count of physician assistants practicing within the county, including those in residency training programs, not a count of practice sites.

Respiratory Care Practitioners (RCPs) Reporting Primary or Secondary Practice Sites by County, 2019

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|
| Abbeville | 7 | 4 |
| Aiken | 44 | 4 |
| Allendale | 4 | 2 |
| Anderson | 80 | 5 |

| Spartanburg | 163 | 7 |
| Sumter | 30 | 11 |
| Union | 15 | 4 |
| Williamsburg | 6 | 3 |
| York | 60 | 4 |

This table includes the number of respiratory care practitioners (RCPs) who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 8/1/2019. RCPs can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second practice county location. Note that this is a count of RCPs practicing within the county, not a count of practice sites.

Clinical Social Workers* Reporting Primary or Secondary Practice Sites by County, 2019

| County | # whose primary practice is in this county | # who have a secondary practice in this county |
|--------------|--|--|
| Abbeville | 3 | 2 |
| Aiken | 66 | 0 |
| Allendale | 3 | 0 |
| Anderson | 64 | 1 |
| Bamberg | 2 | 0 |
| Barnwell | 2 | 0 |
| Beaufort | 88 | 0 |
| Berkeley | 44 | 1 |
| Calhoun | 2 | 0 |
| Charleston | 394 | 2 |
| Cherokee | 10 | 0 |
| Chester | 4 | 1 |
| Chesterfield | 8 | 0 |
| Clarendon | 6 | 1 |
| Colleton | 11 | 0 |
| Darlington | 11 | 0 |
| Dillon | 5 | 0 |
| Dorchester | 53 | 0 |
| Edgefield | 3 | 0 |
| Fairfield | 11 | 0 |
| Florence | 53 | 0 |
| Georgetown | 26 | 0 |
| Greenville | 387 | 0 |

This table includes the number of clinical social workers who had their primary practice in a specific county and the additional number who reported a secondary practice site in that county as of 3/1/2019. Social workers can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported office county or address. Assignment to a secondary practice county was based on self-reported second practice office county. Note that this is a count of social workers practicing within the county, not a count of practice sites. One social worker could not be assigned to a primary practice county because no location information was available. *This publication defines a clinical social worker as someone with a license designation of LISW-CP, LISW-AP, LISW-Dual or LMSW, with LMSWs restricted to those employed in non-profit social service agencies, government agencies, hospitals and other healthcare delivery entities.

Psychologists Reporting Primary or Secondary* Practice Sites by County, 2020

| County | # whose primary practice is in this county | # who have a secondary practice in this county* |

This table shows the number of psychologists who had their primary practice in a specific county as of 2/1/2020. Individuals were assigned to a primary practice county based on their self-reported office county; if office county was unknown, assignment was based on their self-reported mailing address county. Note that this is a count of psychologists practicing within the county, not a count of practice sites. *Psychologists may report only a single practice site location on their renewal form, so it is not possible to determine the number of psychologists who may have a secondary practice location in a specific county.

Vital Statistics

Resident Births - The number of all births recorded in 2019. Births are allocated to the county of the mother's residence. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Source: SC DHEC SCAN website: https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/birthtable.aspx, accessed December 16, 2020

Resident Deaths - The number of all deaths recorded in 2019. Deaths are allocated to the county of residence of the decedent. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Source: SC DHEC SCAN website, https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/death2table.aspx, accessed December 16, 2020.

Total Pregnancies Number and Rate – The total number of pregnancies is an estimate based on the sum of live births, abortions, and fetal deaths. Rates are calculated per 1,000 women age 15-44 in the area. Data reported here are from 2019. Note that state-wide pregnancy counts and rates include information not assigned to any specific county, and thus the sum of the county figures do not sum to the state-wide totals. This also affects regional area figures which are based on the sum of the counties included in each region. Pregnancies which are included in the state-wide totals but are not assigned to a specific county are thus not included in the regional area sums. Regional aggregate counts of pregnancy and pregnancy rates were calculated by the SCOHW from county-level pregnancy figures. Regional rates were calculated using 2019 Census population counts for women age 15-44 in the area.

Source: SC DHEC SCAN, https://apps.dhec.sc.gov/Health/Scan/scan/pregnancy/input.aspx, accessed December 16, 2020.

Percent (%) of Births Less Than (<) 2500 Grams – This is the percentage of births in 2019 to mothers with a residence in a specific county in which the baby's birth weight was below 2500 grams. Percentages were calculated by dividing the number of low birth-weight babies by the total number of live births in the county. Regional aggregate counts were calculated by the SCOHW from county-level figures. *Source*: Tables were accessed December 16, 2020 to generate the number of babies born with weights ranging from 0 – 2499 grams from the SC DHEC SCAN website: https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/birthtable.aspx.

Teen Pregnancies Number (#) and Rate — Based on reported pregnancies, live births and abortions among women age 10-19 in 2019. Rates are calculated per 1,000 female population 10-19 years of age in the area. Note that state-wide teen pregnancy counts and rates include information not assigned to any specific county, and thus the sum of the county figures do not sum to the state-wide totals. This also affects regional area figures which are based on the sum of the counties included in each region. Teen pregnancies which are included in the state-wide totals but are not assigned to a specific county are thus not included in the regional area sums. *Source*: Pregnancy data were accessed December 16, 2020 by specifying data for maternal age 10-19 from the SC DHEC SCAN website: https://apps.dhec.sc.gov/Health/Scan/scan/pregnancy/input.aspx. Population data for the rate calculations were generated and downloaded by specifying data for females age 10-19 from the SC DHEC SCAN website: https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/populationtable.aspx. Regional aggregate counts were calculated by the SCOHW from county-level figures.

White Infant Mortality Rate – This rate is defined as the number of infant deaths per 1,000 annual live births to women who report their race as White. Due to low numbers in some counties in the single year statistics, we report a rate calculated from years 2017-2019. Source: Rates and frequencies were accessed December 17, 2020 by specifying data for Race of Child = "White" from the SC DHEC SCAN website: https://apps.dhec.sc.gov/Health/Scan/scan/mch/infantmortality/input.aspx. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Black Infant Mortality Rate - This rate is defined as the number of infant deaths per 1,000 annual live births to women who report their race as Black. Due to low numbers in some counties in the single year statistics, we report a rate calculated from years 2017-2019. *Source*: Rates and frequencies were accessed December 17, 2020 by specifying data for Race of Child = "Black" from the SC DHEC SCAN website: https://apps.dhec.sc.gov/Health/Scan/scan/mch/infantmortality/input.aspx. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Health Status and Behaviors

Cancer Deaths – All deaths resulting from cancer in 2019, based on death certificate data. *Source*: Data were accessed January 4, 2021 by specifying all cancer deaths by county on the SC DHEC SCAN website https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/death2table.aspx. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Behavioral Risk Factor Surveillance Survey (BRFSS) data - Many of the health status indicators presented in this book are based on data collected in the South Carolina section of the Behavioral Risk Factor Surveillance Survey sponsored by the Centers for Disease Control. This edition of the Data Book reports county-level estimates generated by pooling 3 years of BRFSS data from 2017, 2018 and 2019. County, state and regional-level data were provided by the DHEC Office of Public Health Statistics and Information Services. For those counties with a sample size less than 200, data were not provided and the DHEC regional statistic was reported instead for that county. In the case of Allendale, Calhoun, Cherokee, Fairfield, Hampton, Lee, Saluda, and Union counties, the area was too small to calculate accurate statistics so the respective DHEC regional statistic was reported instead for these counties. The following measures of health status were all drawn from this source:

Percent (%) of Adults Diagnosed With Heart Disease - This is the percentage of adults who answered Yes to: "Has a doctor, nurse, or other health professional EVER told you that you had angina or coronary heart disease?" in the BRFSS in South Carolina.

Percent (%) of Adults Diagnosed With Hypertension - This is the percentage of adults who answered Yes to: "Have you ever been told by a doctor, nurse or other health professional that you have high blood pressure?" in the BRFSS in South Carolina.

Percent (%) of Adults Diagnosed With Diabetes - This is the percentage of adults who answered Yes to: "Have you EVER been told by a doctor that you have diabetes?" in the BRFSS in South Carolina.

Percent (%) of Adults Who Currently Smoke - This number is calculated from the Smoking Risk Factor statistic to determine current smoking status among adults, based on responses to the BRFSS in South Carolina.

Percent (%) Reporting a Sedentary Lifestyle - This is the percentage of adults who answered No to: "During the past month, other than your regular job, did you participate in any physical activities or exercises such as running, calisthenics, golf, gardening, or walking for exercise?" in the BRFSS in South Carolina.

Percent (%) of Adults Overweight or Obese (BMI > 25) – This percentage is based on a calculated risk factor for obesity derived from self-reports of Body Mass Index greater than 25 for adults age 20 and over in the BRFSS in South Carolina.

Percent (%) of Adults Without Health Insurance –This is the percentage of respondents who said No to: "Do you have any kind of health care coverage, including health insurance, prepaid plans such as HMOs, or government plans such as Medicare or Indian Health Services?" in the BRESS in South Carolina.

Healthcare Facilities

General Hospital Beds – The number of general use hospital beds in licensed hospitals. The bed count includes beds within correctional facilities and does not include specialty care beds such as those dedicated to neonatal intensive care, psychiatric, rehabilitation or substance abuse services. *Source*: SC DHEC, Find a Facility tool, https://sc-dhec.maps.arcgis.com/apps/webappviewer/ index.html?id=e8b4eea83cab491bb3e3663093e14656, accessed March 1, 2021.

Hospital Discharges Within Home County – The percent of persons discharged from inpatient hospital treatment inside the patient's county of residence was calculated by dividing the number of in-county resident discharges by the total number of discharges from short-term general hospitals in that county. *Source*: Data provided by the SC Revenue and Fiscal Affairs Office, Health and Demographics Division on February 26, 2021 based on hospital records for 2019. Other hospital utilization statistics can be found at https://rfa.sc.gov/data-research/healthcare.

Skilled Nursing Facility Beds – The number of skilled nursing and institutional beds in licensed nursing homes. *Source*: SC DHEC, Find a Facility tool, https://sc-dhec.maps.arcgis.com/apps/webappviewer/index.html?id=e8b4eea83cab491bb3e3663093e14656, accessed March 1, 2021.

Socio-Economic Factors

Percent (%) Unemployed - 2019 annual average rate of unemployment at the state and county level. These numbers are not seasonally adjusted. *Source*: U.S. Bureau of Labor Statistics website: http://www.bls.gov/lau/#tables, accessed on January 7, 2021. See the county data tables for 2019. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Percent (%) of Households With Income < \$25,000 - This is the percentage of adults who reported their annual household income from all sources as less than \$25,000. Source: BRFSS pooled data from 2017 through 2019 provided by the DHEC Office of Public Health Statistics and Information Services. Data were not provided for counties with a sample size less than 200, so the DHEC regional statistic was reported instead for that county.

Percent (%) With High School Education or Less - This is the percentage of adults who reported the highest grade or year of school completed as less than college level in the Behavioral Risk Factor Surveillance Survey in South Carolina. *Source*: BRFSS pooled data from 2017 through 2019 provided by the South Carolina DHEC Office of Public Health Statistics and Information Services. Data were not provided for counties with a sample size less than 200, so the DHEC regional statistic was reported instead for that county.

Number (#) Covered by Medicaid - Number of persons with full coverage under the South Carolina Medicaid program, including children covered by the CHIP program, during fiscal year 2019. Persons with partial coverage are not included in these counts. *Source*: SC HealthViz, South Carolina eHealth Medicaid Statistics, http://www.schealthviz.sc.edu/medicaid-enrollment, accessed January 7, 2021.

Per Capita Income - Personal income is the income that is received by persons from all sources. It is calculated as the sum of wage and salary disbursements, supplements to wages and salaries, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and personal current transfer receipts, less contributions for government social insurance. Per capita income is calculated as the personal income of all residents in a given area divided by the resident population of that area. In computing per capita personal income, the Bureau of Economic Analysis uses the Census Bureau's annual midyear population estimates. Reported figures are for 2019. Regional aggregate counts were calculated by the SCOHW from county-level figures. Source: U.S. Department of Commerce, Bureau of Economic Analysis, Regional Data, Local Area Personal Income and Employment, Table CA1-3 for South Carolina, http://www.bea.gov/regional/reis/, accessed December 8, 2021.

Definition: Counties in which 50% or more of the population lives outside of an urban area or urban cluster are defined as "rural" in this book. An urbanized area consists of densely developed territory that contains 50,000 or more people. An urban cluster consists of densely developed territory that has at least 2,500 people but fewer than 50,000 people. Geographic entities, such as metropolitan areas, counties, minor civil divisions, places, and census tracts often contain both urban and rural territory, population, and housing units. Based on results of the 2010 Census, the Census Bureau classified all territory, population, and housing units located within urbanized areas and urban clusters as "urban." In general, these urban territories consist of areas of high population density and urban land use resulting in a representation of the "urban footprint" within a geographic area. Rural areas in a county are defined as all territory, population, and housing units located outside of urban areas and urban clusters. Note that the US Census Bureau has not updated this classification with new population data since it was released in 2012.

| Allendale | Colleton | McCormick |
| Bamberg | Dillon | Marion |
| Barnwell | Hampton | Williamsburg |

Definition: Metropolitan and micropolitan statistical areas are geographic entities defined by the U.S. Office of Management and Budget (OMB) for use by federal statistical agencies in collecting, tabulating, and publishing federal statistics. A metropolitan area contains a core urban area of 50,000 or more population. A micropolitan area contains an urban core of at least 10,000 but less than 50,000 population. Each metropolitan or micropolitan area consists of one or more counties and includes the counties containing the core urban area, as well as any adjacent counties that have a high degree of social and economic integration with the urban core (as measured by commuting to work). Any county that is not designated a metropolitan or micropolitan area is designated as a nonmetropolitan area. The designations reported in this book are based on 2010 delineations as updated in March 2020. We anticipate these definitions will be updated after county-level data from the 2020 Census are made available in fall of 2021.

Source: Accessed January 7, 2021 from the U.S. Census Bureau website: https://www.census.gov/geographies/reference-files/time-series/demo/metro-micro/delineation-files.html.

Definition: Each of South Carolina AHEC's four regional centers serves an 11- or 12-county region of the state where they connect students to health careers, health professionals to communities and communities to better health. The centers do this through collaboration with healthcare entities, high schools and colleges, graduate health professions programs and other community partners. Together, the four centers serve all 46 counties in South Carolina.

Definition: Perinatal assessment regions support a geographically structured approach to assuring risk-appropriate care for all mothers and infants with a goal of improving perinatal outcomes and reducing infant mortality. There are five regions organized around the regional Perinatal Centers designated by the SC DHEC.

Definition: Twelve regional workforce development areas work directly with local businesses, agencies and other partners in their region to deliver services and programs. These regional areas provide oversight of the Workforce Investment Act in their area and oversee the state's 48 SC Works Centers, which include a variety of workforce partners and programs.
