

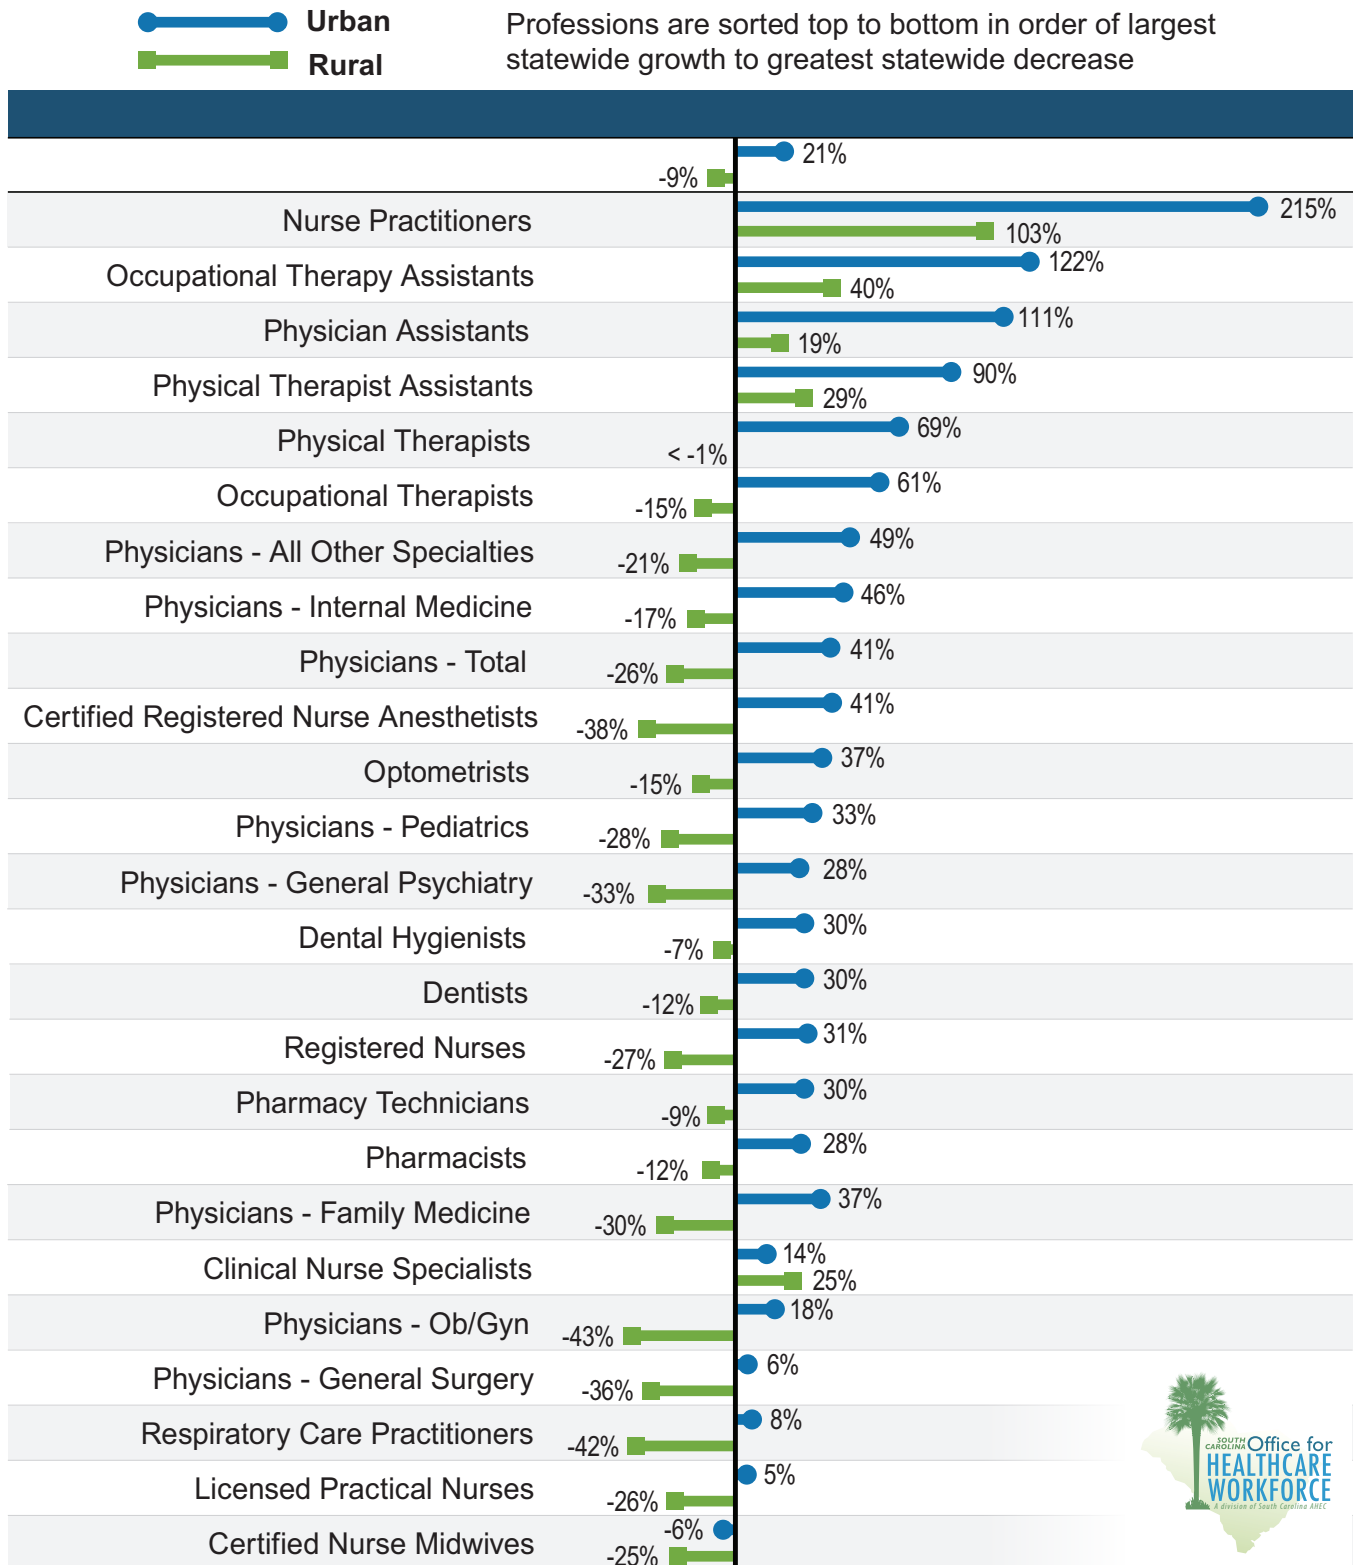

Figure 3. Percent Change in the Number of Licensed Health Professionals, Rural and Urban Counties, South Carolina, 2009/10 - 2019/20*

Notes: This information includes health professionals with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of two months after the end of each profession's license renewal period. Physician counts include residents-in-training. *The figures in this chart are based on the difference in counts from 2010 to 2020 for nurses and physician assistants, and from 2009 to 2019 for other professions and total population. Rural counties are defined as counties in which 50% or more of the population lives outside of an urban area or urban cluster.

Sources: SC Office for Healthcare Workforce, derived from data collected by the SC Department of Labor, Licensing and Regulation and obtained from the SC Revenue and Fiscal Affairs Office; DHEC SCAN, https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/populationtable.aspx; US Census Bureau, Geography Division, data revised on March 26, 2012, <https://www.census.gov/programs-surveys/geography/guidance/geo-areas/urban-rural/2010-urban-rural.html>. Created 6/30/2022.

Table 1. Numeric and Percent Change in the Number of Licensed Health Professionals, South Carolina, 2009/10 - 2019/20*

Data and Limitations

Data Sources

Licensure data were obtained from the South Carolina Revenue and Fiscal Affairs Office (RFA), the official repository of data collected by the state's licensing boards under the South Carolina Department of Labor, Licensing and Regulation (LLR).

Population data for 2009 and 2019 are from DHEC SCAN, https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/populationtable.aspx.

Rural counties are defined as counties in which 50% or more of the population lived outside of an urban area or urban cluster in the 2010 Census. Source: US Census Bureau, Geography Division, revised March 26, 2012, <https://www.census.gov/programs-surveys/geography/guidance/geo-areas/urban-rural/2010-urban-rural.html>.

Data Notes

It is important to consider the relative size of an occupation when measuring percent change. For example, RNs and pharmacists grew at the same rate of 21% statewide, but the number of RNs increased by 7,560 and the number of pharmacists increased by 844.

The information in this analysis includes health professionals with an active license to practice and a self-reported primary practice location in a nonfederal setting in South Carolina as of two months after the end of each profession's license renewal period. The effective years for nurses and physician assistants are 2010 and 2020, and 2009 and 2019 for all other professions. Physician counts include physicians who have completed residency or are still in residency training, and are based on self-reported primary specialty. Nurses employed in federal settings are included in 2020 due to changes in how the South Carolina Board of Nursing collected that information in 2020.

Limitations

The data presented here provide a snapshot in time and are only current as of the date of renewal.

Most of the data reported for 2019 and 2020 were collected prior to COVID-19. The 2020 nurse licensure renewal period was extended through September 2020; however, the majority of nurses renewed their license by the end of April 2020. Because of the ways the pandemic has disrupted health care and health employment patterns, caution should be used in interpreting the data in this report for current workforce needs.

South Carolina participates in the enhanced Nurse Licensure Compact (eNLC, or "Compact"), which allows RNs with a multi-state license to practice in another Compact state without obtaining additional licenses or registrations. Since they are not required to register with the South Carolina Board of Nursing, Compact nurses licensed in a home state outside of South Carolina are not captured in the licensure data.

The South Carolina Office for Healthcare Workforce started tracking social workers in 2017 and psychologists in 2020. As older data are not available for comparison, these professions are excluded from this analysis.
