Introduction

This publication provides information about the number of healthcare professionals actively practicing in South Carolina, along with measures of the health status of South Carolina's population. This information is presented in several ways:

- Detailed tables by county and region reporting the number of healthcare professionals with a primary practice site in that area, the age and racial profile of the population, a selection of vital statistics and health status indicators, information about healthcare facilities, and a selection of statistics related to socio-economic conditions that are closely associated with healthcare status and outcomes;
- A table and chart showing the 2-year change in the number of health professionals in the state;
- Dot maps showing the distribution of healthcare professionals by their primary practice location zip code;
- Shaded county-level maps showing the distribution of healthcare professionals relative to population, based on best available, self-reported, primary practice location; and
- Summary tables, by profession, showing the total number of healthcare professionals who report having either a primary or a secondary practice location within that county. If a health professional reports having both a primary and a secondary practice in the same county, they are counted only once in the "primary practice" count. Providers who have more than one secondary site outside of their primary practice county are counted in each unique secondary county location.

The following professions are profiled in this report: physicians, nurses (including registered nurses [RNs], certified nurse midwives [CNMs], nurse practitioners [NPs], certified registered nurse anesthetists [CRNAs], clinical nurse specialists [CNSs], and licensed practical nurses [LPNs]), dentists and dental hygienists, occupational therapists (OTs) and occupational therapy assistants (OTAs), optometrists, pharmacists and pharmacy technicians, physical therapists (PTs) and physical therapist assistants (PTAs), physician assistants (PAs), respiratory care practitioners (RCPs), clinical social workers, and psychologists. Professions are ordered this way to remain consistent with previous editions of this publication.

Detailed notes on data sources and regions can be found in **Appendix 1** and **Appendix 2**. A full list of profession, organization and data acronyms can be found in **Appendix 1** on page 186.

This information has been compiled by the South Carolina Office for Healthcare Workforce (SCOHW). SCOHW is a division of South Carolina AHEC that studies issues affecting the balance of supply and demand for different types of healthcare professionals across South Carolina. Our primary mission is to develop accurate, reliable information about the healthcare workforce in South Carolina and to make that information widely available to support planning and policy decisions. Neutrality is of the utmost importance when disseminating data and information that may inform policy. We strive to be neutral in our approach to workforce analysis, providing accurate, timely information that is grounded in evidence and free from bias or agenda. Readers interested in additional information on any of the licensed health professions included in this publication are welcome to contact us directly through our website at **www.scahec.net/scohw**. This report is also available for download at no cost on our website.

Data Sources, Definitions, and Limitations

A NOTE ABOUT COVID-19:

The Federal COVID-19 Public Health Emergency ended on May 11, 2023. The data in this report represent the activity status and practice location of the licensed healthcare workforce in South Carolina in 2023 and 2024. Some professions were still renewing their licenses during the end of the COVID-19 pandemic, and others renewed later. Caution should still be used when comparing these data to current practice and longitudinal trends.¹

Health Professions Data Source

The professions profiled in this report are required by state law to obtain a license to practice within South Carolina.² In South Carolina, healthcare workforce data are collected during the license renewal process mandated by the regulatory boards within the South Carolina Department of Labor, Licensing and Regulation (LLR). Some professions in the state renew their license every two years (biennially) and others renew annually.

While the specific data elements collected during the renewal process vary slightly for each licensed group, each licensure database includes basic demographic, practice, and location information for each of the healthcare profession groups included in this book. All data are self-reported by the licensee at the time of initial application for licensure and subsequent license renewal.

The South Carolina Revenue and Fiscal Affairs Office, Data Integration and Analysis Division (RFA) is the official repository for statistical data relating to licensed health professionals in South Carolina. RFA cleans, maintains, and stores the licensure data provided by LLR. SCOHW obtains de-identified data files from RFA and uses them to create the counts and maps of healthcare providers in this book and for other health workforce analyses.

Health Professions Data Definitions

Who is defined as actively practicing in the state?

The counts of licensed healthcare professionals in this report **include individuals who hold an active license to practice and report they are actively practicing in their field in a nonfederal setting within the state of South Carolina**. This definition may include educators, researchers, and administrators who do not engage in direct patient care but are still actively engaged in their profession and the workforce.

¹ Centers for Disease Control and Prevention. End of the federal COVID-19 Public Health Emergency (PHE) declaration. https://archive.cdc.gov/www_cdc.gov/coronavirus/2019-ncov/your-health/end-of-phe.html. Updated September 12, 2023. Accessed December 19, 2025.

² An exception is made for health professionals who practice solely within a federal or military facility, such as a Veterans Administration hospital, and nurses who hold a multi-state license in another Nurse Licensure Compact state. See Limitations for additional information.

Active: Licensed individuals who are currently practicing or seeking employment in their respective profession.

In-state: Licensed individuals who practice within South Carolina.

Nonfederal: Licensed individuals who do not report working for the federal government or within a federal practice setting, such as a military installation or Veterans Affairs facility. Physicians (Doctors of Medicine [MDs] and Doctors of Osteopathic Medicine [DOs]) who indicate a primary practice setting in a federally-qualified health center or rural health center are counted among the nonfederal physician workforce because they provide services to the civilian population. Beginning in 2020, the nurse licensure renewal forms do not include a question on federal status; therefore, the current count of nurses licensed in South Carolina may include nurses who are employed in a federal setting (see “Federal” bullet below).

Residents-in-training: Licensed physicians (MDs and DOs) who are enrolled in graduate medical education programs and actively practicing. These residents-in-training contribute a significant amount of care to South Carolina’s population and are included in the physician counts in this book. The 1,843 residents-in-training who were actively practicing in the state at the time this information was collected made up approximately 13% of the physician workforce.

Clinical social worker counts include individuals with a license designation of LISW-Clinical Practice, LISW-Advanced Practice, LISW-Dual (clinical practice and advanced practice), or LMSW. Prior to this data book, LMSWs reporting a practice setting of “other” (i.e., outside of a non-profit agency, government agency, or health delivery facility) were excluded. Based on expert feedback, we are including all active LMSWs, regardless of practice setting, in this data book. Caution should be used when comparing to previous data.

In prior data books, APRNs were classified by their primary national certification specialty (e.g., family nurse practitioner, psychiatric/mental health clinical nurse specialist), regardless of whether they were practicing as an APRN or an RN. In the 2024 license renewal, APRNs reported whether they were practicing as an APRN and reported a position type (RN, CNM, CNS, CRNA, NP). For this data book, APRNs reporting a position type of RN were counted as RNs. All other APRNs were classified using a combination of position type and national certification.

Who is excluded from the active, in-state nonfederal counts?

A health professional may hold a license to practice in South Carolina, but not everyone who holds a license is actively practicing within the state. Healthcare professionals may change their work status over time by changing from full- to part-time, temporarily leaving the workforce to have children or care for family members, retiring, moving to another state but maintaining their South Carolina license, or maintaining their license but working in another field. Including licensees who are not actively practicing would overestimate the workforce available to provide care.

The counts in this book **exclude individuals who are not actively practicing within their field, do not report a practice location within South Carolina, or are employed by the federal government.**

Inactive: Licensed individuals who are retired or not actively practicing in their current field.

Out-of-state: Licensed individuals who do not report a practice location within South Carolina.

Federal: Licensed individuals who indicate their employer as “Federal, Military” or “Federal, Civilian” and are employed in military or federal practice settings (with the exception of physicians employed in federally qualified health centers and rural health centers, which are included in nonfederal physician counts as noted previously). As long as a health professional is licensed in one state or territory, they may work under federal employment in any state³; therefore, we are unable to identify federal health professionals who do not hold a license in South Carolina. Additionally, federal health professionals serve only specific populations and not the general public.

Counts may be further restricted due to criteria unique to certain professions. Profession-specific exclusions are:

Social Workers: Individuals with a license type of LBSW are excluded from counts of clinical social workers.

Registered Nurses: South Carolina participates in the enhanced Nurse Licensure Compact (eNLC).⁴ Registered nurses (RNs) and licensed practical nurses (LPNs) in eNLC states and territories may apply for a single-state or multi-state license. A single-state license allows RNs and LPNs to practice only within their state of permanent residence (home state). A multi-state license, much like a driver’s license, allows RNs and LPNs to practice within their home state and in any other participating eNLC state without having to obtain additional licenses or registrations. RNs and LPNs who hold a current multi-state license with South Carolina as their home state and indicate an active practice location within South Carolina are counted in the 2024 licensure data. eNLC nurses licensed in a home state outside of South Carolina are not captured in our state’s licensure data because they are not required to register with the SC Board of Nursing.

How are health professionals assigned to a county?

Individuals are assigned to a county based on best available, self-reported practice location. Where possible, primary practice location county is used. If primary practice location county is unknown, they are assigned a location based on practice ZIP code, or business county or ZIP code if practice location information is missing. If there is no other usable location information (e.g., city or zip code) for individuals reporting they are actively working in South Carolina, county designations are assigned based on mailing address county. For individuals that report working within South Carolina but who report an out-of-state county or zip code, additional location information is used to verify in-state or out-of-state practice.⁵ Additionally, some zip codes cross county boundaries and require manual coding to one county or the other.

How are health professionals assigned to a zip code for mapping purposes?

A small number of individuals who report practicing within the state cannot be assigned to a zip code for purposes of the dot density maps in this book because their address information was invalid or insufficient. These individuals are included in the state counts but are not included in the maps. See map footnotes to identify the number of individuals missing location information.

³ For additional information, see <https://federalregister.gov/d/2020-24817>.

⁴ For more information, refer to the National Council of State Boards of Nursing at <https://www.ncsbn.org/compacts.htm>.

⁵ For example, an individual who reports working for an organization based in North Carolina and lists Mecklenburg County (Charlotte, NC) as their primary practice county but provides a primary practice zip code located in Fort Mill, SC will be located to Fort Mill.

What is the time period for which health professionals are counted?

The time periods for which our workforce counts are based differ for each professional group. The license renewal process occurs on a biennial cycle (every two years) for some health professions, or annually for other health professions. Individuals are counted if they show an active status two months after their license expiration date. See **Table 1** for the effective (or post-lapse) date for each profession included in this report.

License expiration, or lapse, date:

Each profession has a specified period during which they may renew their license. If an individual does not renew their license by a certain date, the license lapses and they may not practice until they are reinstated or obtain a new license. For all professions except for dentists and dental hygienists, this date coincides with the end of the license renewal period. The license expiration date for dentists and dental hygienists is set for two months after the posted renewal period.

Post-lapse date:

To account for late renewals and potential delays in administrative processing, data provided for this report and all other SCOHW analyses are generated from data downloaded two full months after the license lapse date, or “two months post-lapse.” Because nurse licenses expire on April 30 in each renewal year, and because of the volume of new applications for licensure from nursing graduates in May, only nurses who held a license at the time of renewal and have an active license two months post-lapse are included; new nurse licenses processed during this period are excluded from the analysis file.

Because different professions renew their licenses at different times, it is not possible to produce a true “snapshot” of the healthcare workforce in South Carolina at any single point in time. Also, because licensee information is updated on a biennial cycle for most health professions, it is difficult to get a truly accurate count of the workforce since people are both entering and leaving the workforce over that two-year time period. The true supply and distribution of the health workforce will be most accurate just after each profession’s renewal period closes.

Table 1. Effective Date of Health Professions Data, South Carolina, 2023-2024*

Profession	Renewal Frequency	Effective Date
Physicians	Biennial	September 1, 2023
RNs	Biennial	May 1, 2024
CNMs	Biennial	May 1, 2024
CRNAs	Biennial	May 1, 2024
CNSs	Biennial	May 1, 2024
NPs	Biennial	May 1, 2024
LPNs	Biennial	May 1, 2024
Dental Hygienists	Biennial	May 1, 2023
Dentists	Biennial	May 1, 2023
OTs	Biennial	May 15, 2023
OTAs	Biennial	May 15, 2023
Optometrists	Biennial	March 1, 2023
Pharmacists	Annual	June 1, 2023
Pharmacy Technicians	Annual	September 1, 2023
PTs	Biennial	March 1, 2023
PTAs	Biennial	March 1, 2023
PAs	Biennial	March 1, 2024
Psychologists	Biennial	February 1, 2024
RCPs	Biennial	August 1, 2023
Clinical Social Workers	Biennial	March 1, 2023

*Note: For professions that renew at the end of the year (i.e., dentists, dental hygienists, PAs, psychologists), the post-lapse data file is generated in the next calendar year. For example, the PA renewal period ended 12/31/2023, but the date on which the file was generated post-lapse is 3/1/2024. In reports prior to the 2021 Data Book, these professions were reported for their renewal date instead of for their post-lapse date. While the time between renewal periods did not change, this labeling should be noted for longitudinal analyses.

Limitations of Health Professions Data

The inclusion and exclusion criteria used in this report, combined with the timing of renewal periods across professions, may produce a conservative count of the healthcare workforce at any given time. Additional considerations include:

- New licensees who have moved into South Carolina from another state or are new graduates receiving their initial license to practice in South Carolina may not be required to report their employment or practice status in their initial license application. Depending on when a new licensee receives their initial license to practice, they may be a productive part of the workforce for as many as two years before they complete their first license renewal and are reflected in official workforce counts.
- Established healthcare providers retire, die, move, or otherwise leave practice in between renewal cycles.
- Federal health professionals who hold a license in South Carolina may provide care to civilians outside of the federal system in a secondary practice setting or employment arrangement, but are not captured in our counts.
- Because we are unable to count eNLC nurses with a license from a different home state, we are likely underestimating the number of nurses working within South Carolina.
- We report headcount based on primary practice location, or mailing address if practice location is missing. This may not accurately reflect the availability of health professionals by county, because it does not account for individuals who practice in multiple locations (e.g., working in Richland County three days a week and Fairfield County two days a week) or those that work part-time. The tables showing primary and secondary practice sites by county (page 155) help describe this additional availability and distribution.

Other Data Sources

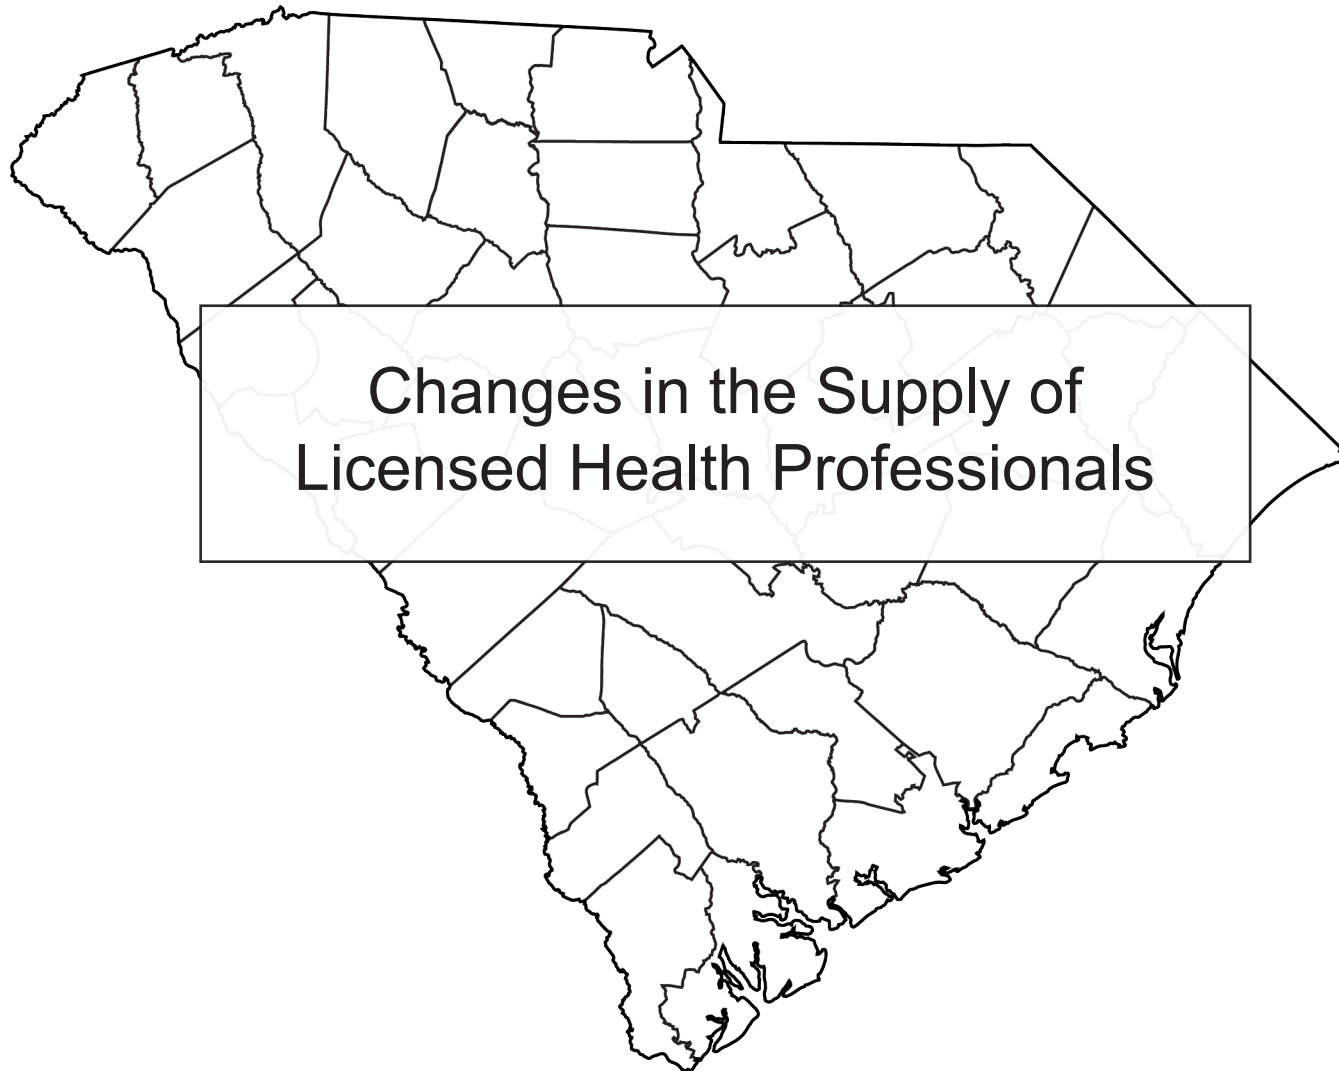

Population Data Source

County-level age and race summary tables were provided by the Data Integration and Analysis Division of the South Carolina Revenue and Fiscal Affairs Office (RFA), based on the U.S. Census Bureau's Vintage 2023 Postcensal Estimates. Regional aggregates were created by the South Carolina Office for Healthcare Workforce staff. Percentages may not sum to 100% due to rounding. Due to small numbers, the "other" category groups Native Hawaiian or Pacific Islander and two or more races.

Demographic, Health Facility, and Economic Data

This publication includes information on different types of health status in the population – vital statistics such as births, deaths, and pregnancies; hospital and nursing home beds; hospital discharges within resident's home county; and socio-economic indicators such as unemployment, education, income, and health insurance coverage. Definitions of each statistic and its source can be found in ***Appendix I: Data Definitions and Sources***.

In addition to reporting information at the county level, data have been aggregated into regional summaries. There are several different regional definitions included in this book that are used by one or more governmental agencies for planning or program implementation purposes. These include AHEC service areas, DPH regions, perinatal regions, and workforce development areas. We also include two different definitions of the rural and urban areas of our state. The county listing, definition, and source for each regional categorization can be found in ***Appendix II: Regional Definitions***.

This page intentionally left blank

Change in the Supply of Licensed Health Professionals

The table and chart in this section show the two-year change in licensed health professionals actively practicing within South Carolina between 2022-2024 for nurses, physician assistants, and psychologists, and between 2021-2023 for all other professions included in this book.

Change is shown for total counts and for the ratio of health professionals per 10,000 population, calculated as the number of health professionals in the state divided by the state's population and multiplied by 10,000. The ratio of Ob/Gyns and CNMs is calculated per 10,000 women aged 15-44. The ratio of pediatricians is calculated per 10,000 children aged 0-17.

The change in total population, women aged 15-44, and children aged 0-17 is also shown for relative comparison.

The table is sorted in the order in which each health profession is presented in the rest of the book. The chart is sorted from greatest increase at the top to greatest decrease at the bottom.

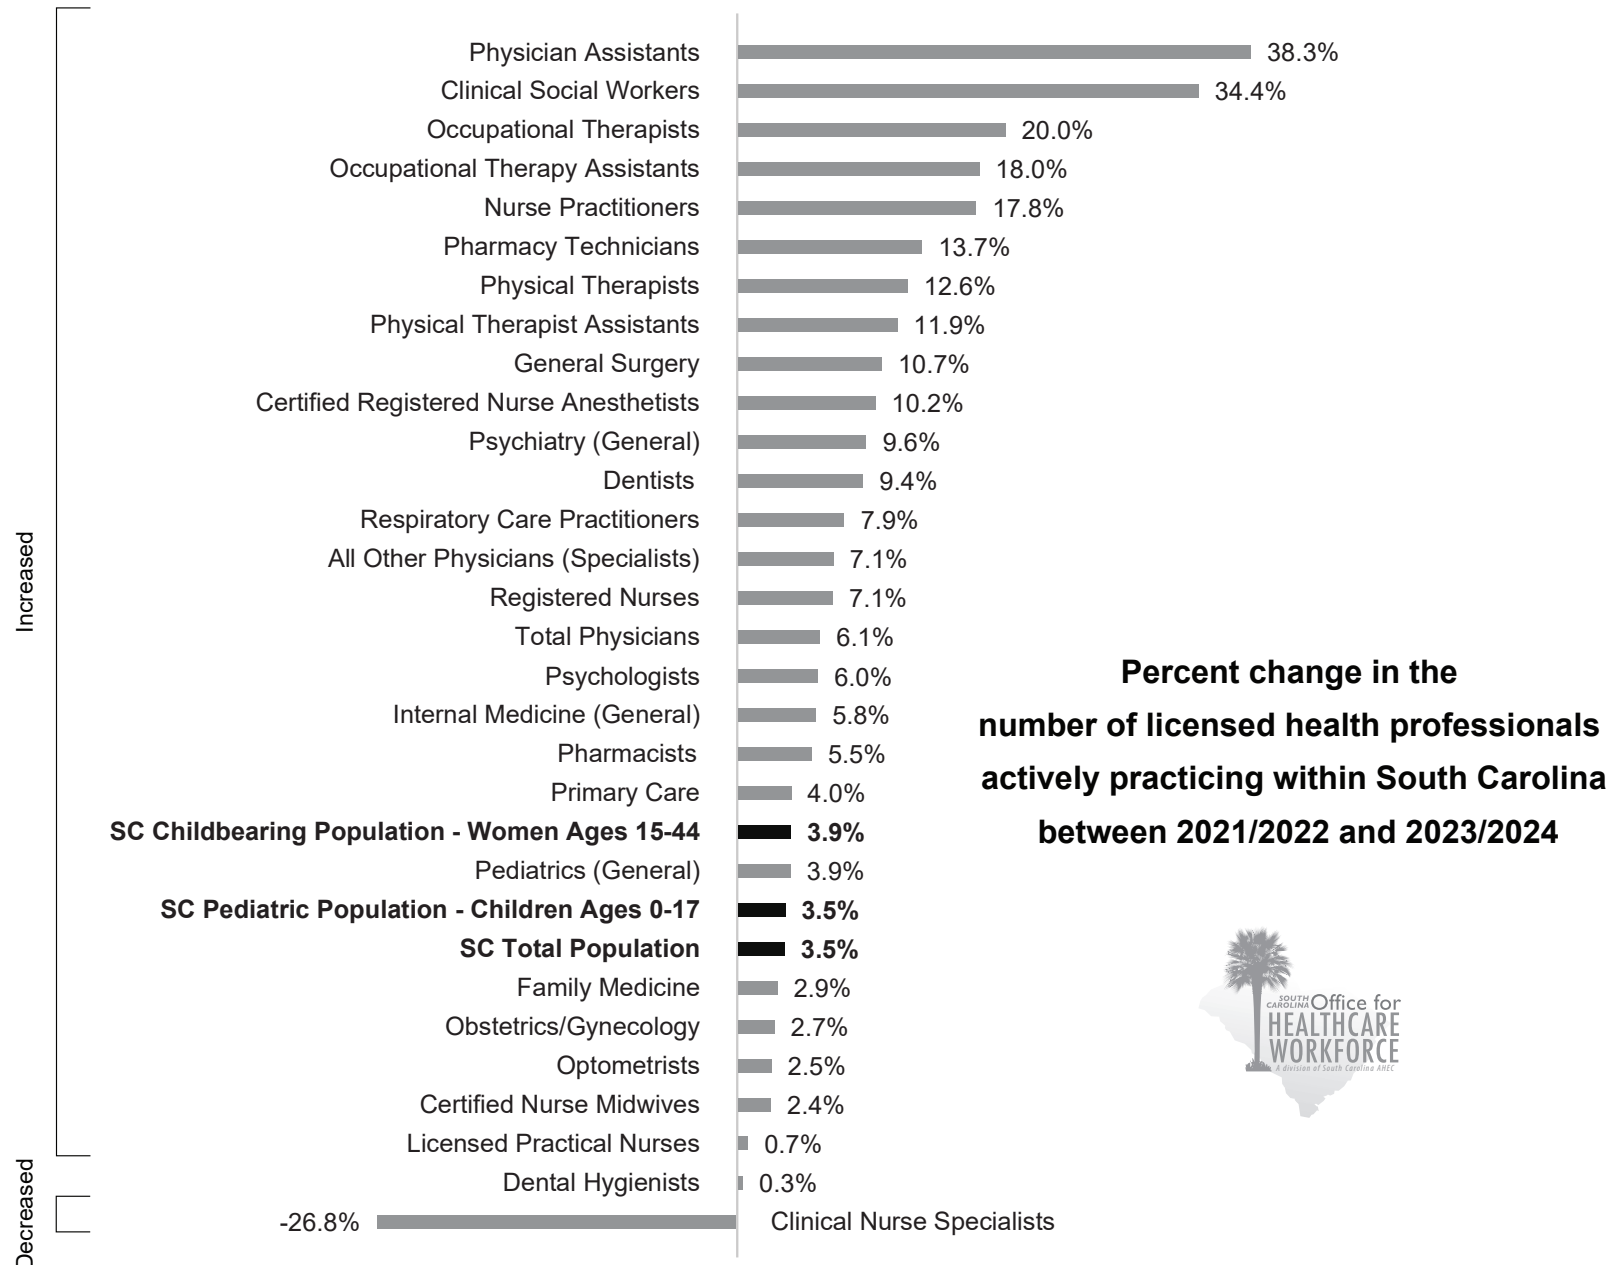

Caution should be used when comparing the percent change in APRNs (NPs, CNMs, CRNAs, CNSs) and clinical social workers due to changes in how they were counted in this data book. See page 3 for a more detailed explanation.

Notes: Data include health professionals with an active license to practice and a practice location within South Carolina at the time of their license renewals in 2021/2022 and 2023/2024.

Source: South Carolina Office for Healthcare Workforce at South Carolina AHEC with data collected by the South Carolina Department of Labor, Licensing and Regulation, and obtained from the South Carolina Revenue and Fiscal Affairs Office (RFA). Population data (2023) provided by RFA's Data Integration and Analysis Division, based on the Vintage 2023 Postcensal Estimates from the U.S. Census Bureau.

Percent Change in the Count and Ratio of Licensed Health Professionals per 10,000 Population, South Carolina, 2021/2022 to 2023/2024

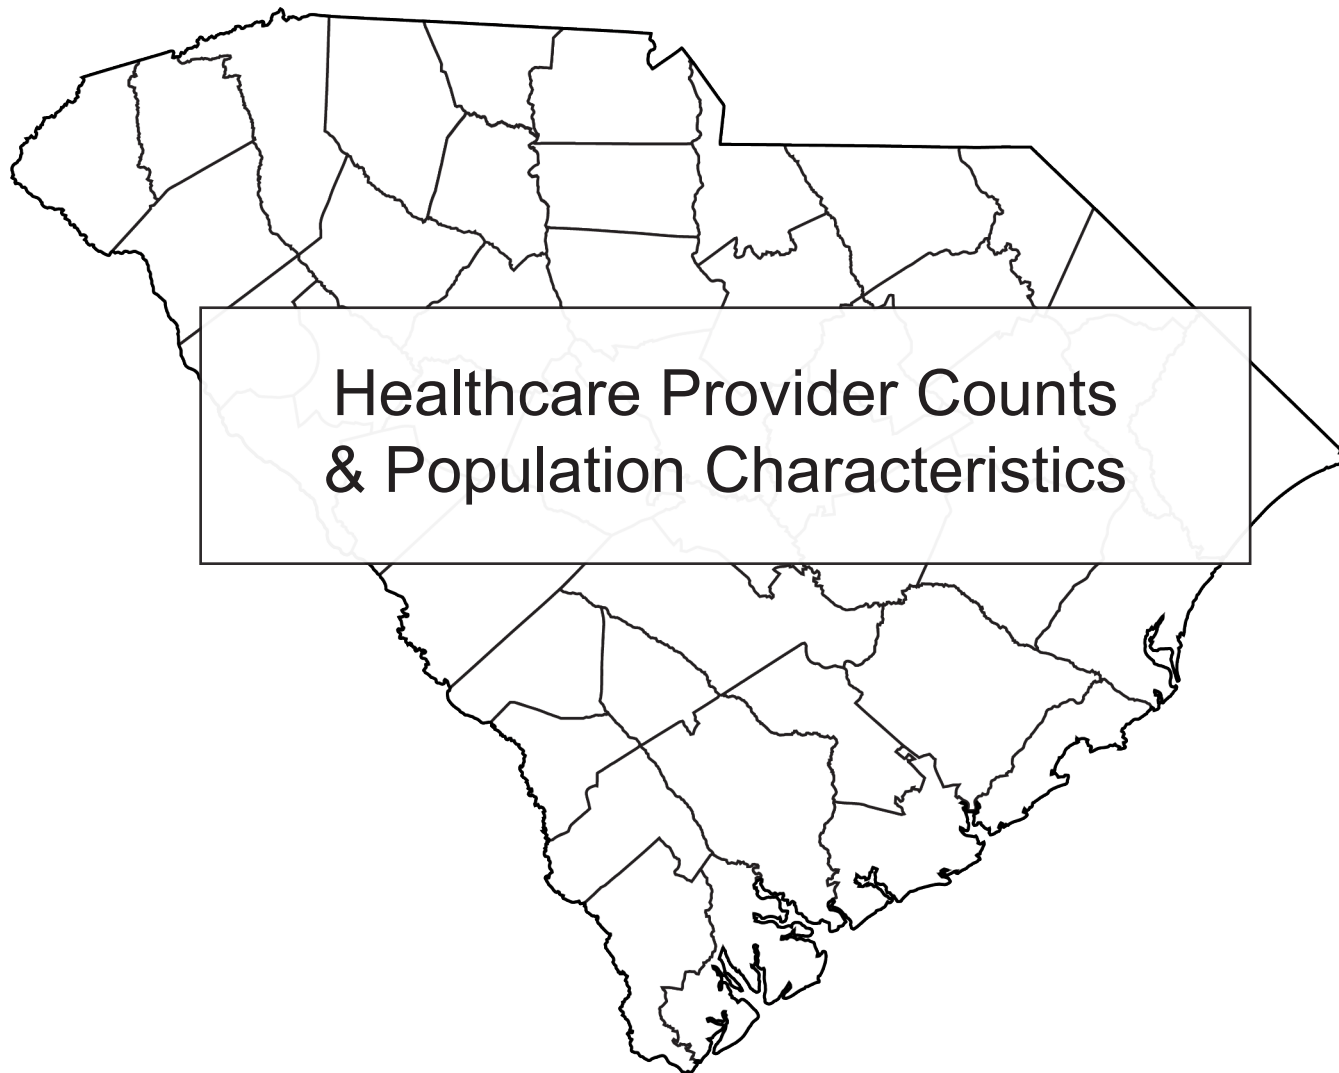

Profession	2021/2022	2023/2024	% Change	2021/2022 Ratio	2023/2024 Ratio	% Change

Understanding the Healthcare Provider Maps

The healthcare provider maps in this section show how the healthcare professionals enumerated in the book are distributed across the state.¹ There are two types of maps:

- **Dot density maps** show the distribution of each health profession by self-reported primary practice location.
 - One dot represents one individual.
 - The dots are based on best available, self-reported primary practice location zip code.²
 - Dots are randomly scattered within the zip code area (boundaries not shown) and may not represent the actual street address of the practice. Zip code areas may cross county boundaries.
- **Shaded county maps** show the ratio of each health profession relative to population, by county, calculated as the number of health professionals in the county divided by the county's population and multiplied by 10,000.
 - Calculating ratios allows us to adjust for differences in population and compare the relative availability of health professionals across geographic areas – in this case, counties in South Carolina.
 - This ratio is a nationally recognized standard and provides comparability to national and other state data. It is also sometimes calculated per 1,000 or 100,000 population.
 - Most health professionals per 10,000 population are based on total population, with three exceptions:
 - Ob/Gyns and CNMs are calculated relative to women of childbearing age (15-44). While women of other ages are not reflected in this map, it is important to recognize that Ob/Gyns and CNMs can provide care to women of all ages in addition to delivering babies.
 - Pediatricians are calculated relative to children ages 0-17, as other national organizations report in their data.^{3, 4}
 - These changes in calculating ratios of Ob/Gyns, CNMs, and pediatricians began with the 2021 Data Book and will differ from previous editions. Caution should be used in comparing data to earlier years.
 - The data ranges in the map legend are designed to be intuitive and consistent across most professions. Larger professions, such as registered nurses, total physicians, and pharmacy technicians, required higher ranges. Please note the ranges when reviewing each map.
 - At the right of each data range is a number in parentheses. This number indicates the number of counties in that data range. All data ranges are shown in the legend, though there may not be any counties in that range for certain professions.

¹ Detailed notes on how health professionals are counted can be found in the introductory text on page 2.

² A small number of individuals who report practicing within the state cannot be assigned to a county or to a zip code because their address information was invalid or insufficient. These individuals are included in the state counts, but are not included in county or region pages or the maps. The footnotes of each map will show the number of individuals missing sufficient location information, if any.

Counties of South Carolina

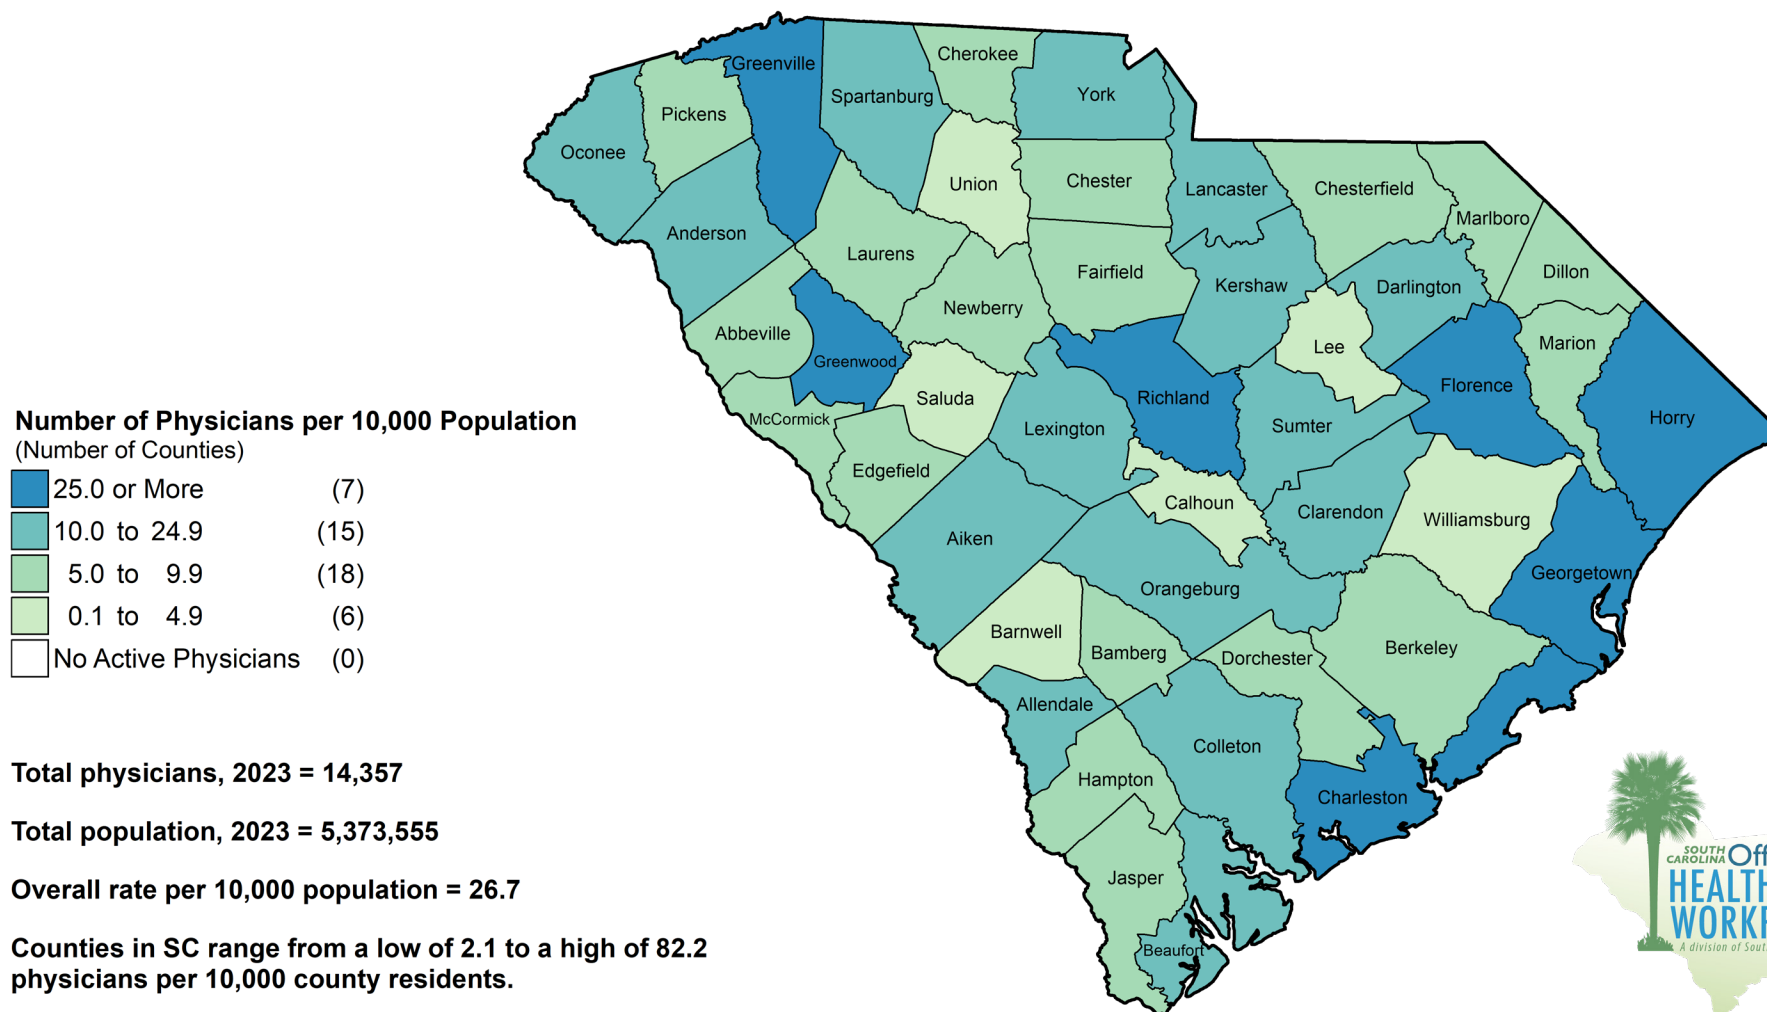

Total Physicians by Primary Practice Location South Carolina, 2023

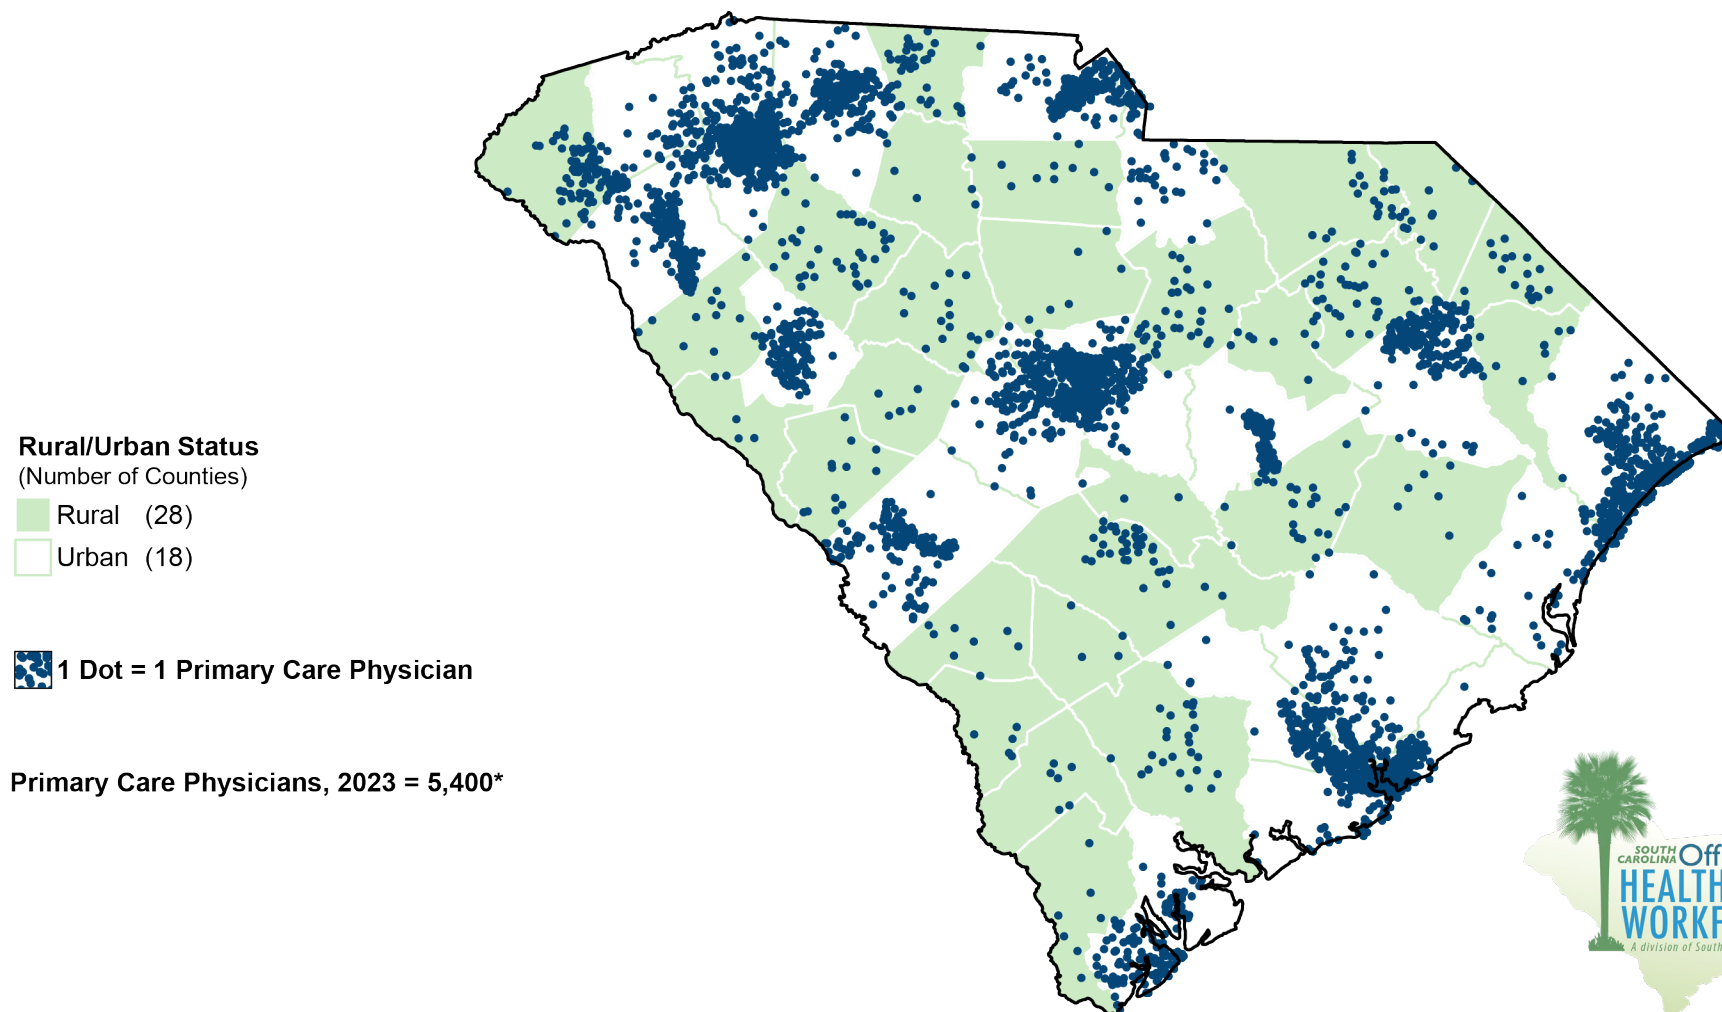

This information is based on all physicians, including residents-in-training, with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2023. Counts are based on best available self-reported practice location information. Dots are randomly scattered within the zip code area and may not represent the actual street address of the practice. *This map omits 7 physicians who did not have a valid South Carolina zip code. Source: South Carolina Office for Healthcare Workforce, SC AHEC, with data collected by the SC Department of Labor, Licensing and Regulation and obtained from the SC Revenue and Fiscal Affairs Office. Rural definition from the U.S. Census Bureau, Geography Division, <https://www.census.gov/programs-surveys/geography/guidance/geo-areas/urban-rural.html>. Rural counties are those counties where 50% or more of the population lives outside an urbanized area based on the 2020 Census.

Total Physicians per 10,000 Population South Carolina, 2023

York	634	10

This information is based on all physicians, including residents-in-training, with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2023. Physicians can report up to 3 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second or third practice county location. If a physician reports having both a primary and a secondary practice in the same county, they are counted only once in the “primary practice” count. Note that this is a count of physicians practicing within the county, including those in residency training programs, not a count of practice sites.

This information is based on all physicians, including residents-in-training, with a primary specialty of psychiatry that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2023. Psychiatric subspecialists are not included. Physicians can report up to 3 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second or third practice county location. If a physician reports having both a primary and a secondary practice in the same county, they are counted only once in the “primary practice” count. Note that this is a count of physicians practicing within the county, including those in residency training programs, not a count of practice sites.

This information is based on all physicians, including residents-in-training, with a primary specialty of anything other than family medicine, general internal medicine, obstetrics, gynecology, general pediatrics, general psychiatry or general surgery that have an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 9/1/2023. Physicians can report up to 3 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second or third practice county location. If a physician reports having both a primary and a secondary practice in the same county, they are counted only once in the "primary practice" count. Note that this is a count of physicians practicing within the county, including those in residency training programs, not a count of practice sites.

This information is based on all registered nurses (RNs) with an active license to practice and a primary practice location in South Carolina as of 5/1/2024. The numbers exclude RNs approved and working as advanced practice registered nurses (APRNs: NPs, CNMs, CRNAs, CNSs). Nurses can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county based first on their self-reported primary practice county or street address; if primary practice county and street address were unknown, self-reported mailing address county was used. Assignment to a secondary practice county was based on self-reported second practice county location. If an RN reports having both a primary and a secondary practice in the same county, they are counted only once in the "primary practice" count. Note that this is a count of RNs practicing within the county, not a count of practice sites.

This information is based on all pharmacists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 6/1/2023. Pharmacists can report up to 3 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported primary practice county or street address. Assignment to a secondary practice county was based on self-reported second or third practice county location. If a pharmacist reports having both a primary and a secondary practice in the same county, they are counted only once in the "primary practice" count. Note that this is a count of pharmacists practicing within the county, not a count of practice sites.

This information is based on all social workers with an active license to practice, a license designation of LISW-Clinical Practice, LISW-Advanced Practice, LISW-Dual, or LMSW, and a primary practice location in a nonfederal setting in South Carolina as of 3/1/2023. Social workers with a license designation of LBSW are excluded. Social workers can report up to 2 practice locations on their license renewal form. Individuals were assigned to a primary practice county based on their self-reported office county or address. Assignment to a secondary practice county was based on self-reported second practice office county. If a social worker reports having both a primary and a secondary practice in the same county, they are counted only once in the "primary practice" count. Note that this is a count of social workers practicing within the county, not a count of practice sites.

This information is based on all psychologists with an active license to practice and a primary practice location in a nonfederal setting in South Carolina as of 2/1/2024. Individuals were assigned to a primary practice county based on their self-reported office county; if office county was unknown, assignment was based on their self-reported mailing address county. Note that this is a count of psychologists practicing within the county, not a count of practice sites. *Psychologists may report only a single practice site location on their renewal form, so it is not possible to determine the number of psychologists who may have a secondary practice location in a specific county.

%	Percent

Vital Statistics

Resident Births - The number of all births recorded in 2023. Births are allocated to the county of the mother's residence. Regional aggregate counts were calculated by the SCOHW from county-level figures. Source: SC DHEC SCAN website: https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/birthtable.aspx, accessed December 6, 2024.

Resident Deaths - The number of all deaths recorded in 2023. Deaths are allocated to the county of residence of the decedent. Regional aggregate counts were calculated by the SCOHW from county-level figures. Source: SC DPH SCAN website, https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/death2table.aspx, accessed December 6, 2024.

Total Pregnancies Number and Rate – The total number of pregnancies is an estimate based on the sum of live births, abortions, and fetal deaths. Rates are calculated per 1,000 women age 15-44 in the area. Data reported here are from 2023. Note that state-wide pregnancy counts and rates include information not assigned to any specific county, and thus the sum of the county figures do not sum to the state-wide totals. This also affects regional area figures which are based on the sum of the counties included in each region. Pregnancies which are included in the state-wide totals but are not assigned to a specific county are thus not included in the regional area sums. Source: SC DPH SCAN, <https://apps.dhec.sc.gov/Health/Scan/scan/pregnancy/input.aspx>, accessed December 6, 2024.

Percent (%) of Births Less Than (<) 2500 Grams – This is the percentage of births in 2023 to mothers with a residence in a specific county in which the baby's birth weight was below 2500 grams. Percentages were calculated by dividing the number of low birth-weight babies by the total number of live births in the county. Regional aggregate counts were calculated by the SCOHW from county-level figures. Source: Tables were accessed December 6, 2024 to generate the number of babies born with weights ranging from 0 – 2499 grams from the SC DPH SCAN website: https://apps.dhec.sc.gov/Health/SCAN_BDP/tables/birthtable.aspx.

Teen Pregnancies Number (#) and Rate – Based on reported pregnancies, live births, and abortions among women age 10-19 in 2023. Rates are calculated per 1,000 female population 10-19 years of age in the area. Note that state-wide teen pregnancy counts and rates include information not assigned to any specific county, and thus the sum of the county figures do not sum to the state-wide totals. This also affects regional area figures which are based on the sum of the counties included in each region. Teen pregnancies which are included in the state-wide totals but are not assigned to a specific county are thus not included in the regional area sums. Source: Pregnancy data were accessed December 18, 2025 for maternal age 10-19 from the 2023 SC Vital and Morbidity Statistics report: <https://dph.sc.gov/sites/scdph/files/2025-11/VMS-2023.pdf>. Population data for the rate calculations were generated and downloaded by specifying data for females age 10-19 from the United States Census Bureau website: <https://data.census.gov/table/ACSST1Y2023.S0101>. Regional aggregate counts were calculated by the SCOHW from county-level figures.

White Infant Mortality Rate – This rate is defined as the number of infant deaths per 1,000 annual live births to women who report their race as Non-Hispanic White. Due to low numbers in some counties in the single year statistics, we report a rate calculated from years 2021-2023. Source: Rates and frequencies were accessed December 18, 2025 from the 2021, 2022, and 2023 SC Vital and Morbidity Statistics reports: <https://dph.sc.gov/professionals/public-health-data/biostatistics-publications>. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Black & Other Infant Mortality Rate - This rate is defined as the number of infant deaths per 1,000 annual live births to women who report their race as Black & Other. Due to low numbers in some counties in the single year statistics, we report a rate calculated from years 2021-2023. Source: Rates and frequencies were accessed December 18, 2025 from the 2021, 2022, and 2023 SC Vital and Morbidity Statistics reports: <https://dph.sc.gov/professionals/public-health-data/biostatistics-publications>. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Health Status and Behaviors

Cancer Deaths – All deaths resulting from cancer in 2023, based on death certificate data. Source: Data were accessed December 17, 2025 by specifying all cancer deaths by county from the South Carolina Central Cancer Registry: <https://dph.sc.gov/professionals/public-health-data/cancer-registry>. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Behavioral Risk Factor Surveillance Survey (BRFSS) Data - Many of the health status indicators presented in this book are based on data collected in the South Carolina section of the Behavioral Risk Factor Surveillance Survey sponsored by the Centers for Disease Control. This edition of the Data Book reports county-level estimates generated by pooling 5 years of BRFSS data from 2019, 2020, 2021, 2022, and 2023 (except percent of adults diagnosed with hypertension, which was only available for 2017, 2018, 2019, 2021, and 2023). County, state, and regional-level data were provided by SC DPH. For those counties with a sample size less than 200, data were not provided and the DPH regional statistic was reported instead for that county. In the case of some counties, the area was too small to calculate accurate statistics, so the respective DPH regional statistic was reported instead for these counties. The following measures of health status were all drawn from this source:

Percent (%) of Adults Diagnosed with Heart Disease - This is the percentage of adults who answered Yes to: “Has a doctor, nurse, or other health professional ever told you that you had angina or coronary heart disease?” in the BRFSS in South Carolina.

Percent (%) of Adults Diagnosed with Hypertension - This is the percentage of adults who answered Yes to: “Have you ever been told by a doctor, nurse, or other health professional that you have high blood pressure?” in the BRFSS in South Carolina.

Percent (%) of Adults Diagnosed with Diabetes - This is the percentage of adults who answered Yes to: “Have you ever been told by a doctor that you had diabetes?” in the BRFSS in South Carolina.

Percent (%) of Adults Who Currently Smoke - This number is calculated from the Smoking Risk Factor statistic to determine current smoking status among adults, based on responses to the BRFSS in South Carolina.

Percent (%) Reporting a Sedentary Lifestyle - This is the percentage of adults who answered No to: “During the past month, other than your regular job, did you participate in any physical activities or exercises such as running, calisthenics, golf, gardening, or walking for exercise?” in the BRFSS in South Carolina.

Percent (%) of Adults Overweight or Obese (BMI > 25) – This percentage is based on a calculated risk factor for obesity derived from self-reports of Body Mass Index 25 and higher for adults ages 20 and over in the BRFSS in South Carolina.

Healthcare Facilities

General Hospital Beds – The number of general use hospital beds in licensed hospitals. The bed count includes beds within correctional facilities and does not include specialty care beds such as those dedicated to neonatal intensive care, psychiatric, rehabilitation, or substance abuse services. Source: SC DPH, Find a Facility tool, <https://sc-dhec.maps.arcgis.com/apps/webappviewer/index.html?id=e8b4eea83cab491bb3e3663093e14656>, accessed January 29, 2025.

Hospital Discharges within Home County – The percent of persons discharged from inpatient hospital treatment inside the patient's county of residence was calculated by dividing the number of in-county resident discharges by the total number of discharges from short-term general hospitals in that county. Source: Data provided by the SC Revenue and Fiscal Affairs Office, Health and Demographics Division on January 29, 2025 based on hospital records for 2023. Other hospital utilization statistics can be found at <https://rfa.sc.gov/data-research/healthcare>.

Skilled Nursing Facility Beds – The number of skilled nursing and institutional beds in licensed nursing homes. Source: SC DPH, Find a Facility tool, <https://sc-dhec.maps.arcgis.com/apps/webappviewer/index.html?id=e8b4eea83cab491bb3e3663093e14656>, accessed January 29, 2025.

Socio-Economic Factors

Percent (%) Unemployed - 2023 annual average rate of unemployment at the state and county level. These numbers are not seasonally adjusted. Source: U.S. Bureau of Labor Statistics website: <http://www.bls.gov/lau/#tables>, accessed December 9, 2024. See the county data tables for 2023. Regional aggregate counts were calculated by the SCOHW from county-level figures.

Percent (%) of Households with Income < \$25,000 - This is the percentage of adults who reported their annual household income from all sources as less than \$25,000. Source: BRFSS pooled data from 2019 through 2023 provided by the DPH Office of Public Health Statistics and Information Services. Data were not provided for counties with a sample size less than 200, so the DPH regional statistic was reported instead for that county.

Percent (%) with High School Education or Less - This is the percentage of adults who reported the highest grade or year of school completed as high school level or less in the Behavioral Risk Factor Surveillance Survey in South Carolina. Source: BRFSS pooled data from 2019 through 2023 provided by the South Carolina DPH Office of Public Health Statistics and Information Services. Data were not provided for counties with a sample size less than 200, so the DPH regional statistic was reported instead for that county. Note: Previous data books included the % of the population with high school education or less, so these numbers should not be compared over time.

Percent (%) of Adults without Health Insurance - This is the percentage of respondents who said No to: “Do you have any kind of health care coverage, including health insurance, prepaid plans such as health maintenance organizations (HMOs), or government plans such as Medicare or Indian Health Services?” in the BRFSS in South Carolina.

Number (#) Covered by Medicaid - Number of persons with full coverage under the South Carolina Medicaid program, including children covered by the CHIP program, during fiscal year 2022. Persons with partial coverage are not included in these counts. Source: SC HealthViz, South Carolina eHealth Medicaid Statistics, <https://schealthviz.sc.edu/county-profiles>, accessed December 9, 2024.

Per Capita Income - Personal income is the income that is received by persons from all sources. It is calculated as the sum of wage and salary disbursements, supplements to wages and salaries, proprietors' income with inventory valuation and capital consumption adjustments, rental income of persons with capital consumption adjustment, personal dividend income, personal interest income, and personal current transfer receipts, less contributions for government social insurance. Per capita income is calculated as the personal income of all residents in a given area divided by the resident population of that area. The Bureau of Economic Analysis uses the annual midyear population estimates from the Census Bureau in this calculation. Reported figures are for 2023. Regional aggregate counts were calculated by the SCOHW from county-level figures. Source: U.S. Department of Commerce, Bureau of Economic Analysis, Regional Data, Local Area Personal Income and Employment, CAINC1 County and MSA personal income summary: personal income, population, per capita personal income for South Carolina, <https://www.bea.gov/data/income-saving/personal-income-county-metro-and-other-areas>, accessed December 9, 2024.

Definition: Counties in which 50% or more of the population lives outside of an urban area are defined as “rural” in this book. New criteria for defining urban areas based on the 2020 Census were released on March 24, 2022. The new criteria eliminate the use of urban clusters and place increased importance on housing unit density. According to the Census website, “For the 2020 Census, an urban area will comprise a densely settled core of census blocks that meet minimum housing unit density and/or population density requirements. This includes adjacent territory containing non-residential urban land uses. To qualify as an urban area, the territory identified according to criteria must encompass at least 2,000 housing units or have a population of at least 5,000” (US Census Bureau, 2023). Rural areas in a county are defined as all territory, population, and housing units located outside of urban areas. Rural counties were identified in the 2020 Census Urban-Rural County data file where the field POPPCT_RUR was equal to or greater than 50%.

Metropolitan Statistical Areas (MSAs), 2023

Metropolitan (26 counties)

Aiken	Edgefield	Lexington
Anderson	Fairfield	Pickens
Beaufort	Florence	Richland
Berkeley	Greenville	Saluda
Calhoun	Horry	Spartanburg
Charleston	Jasper	Sumter
Chester	Kershaw	Union
Darlington	Lancaster	York
Dorchester	Laurens	

Micropolitan (7 counties)

Abbeville	Greenwood	Orangeburg
Cherokee	Newberry	
Georgetown	Oconee	

Nonmetropolitan (13 counties)

Allendale	Colleton	Marion
Bamberg	Dillon	Marlboro
Barnwell	Hampton	Williamsburg
Chesterfield	Lee	
Clarendon	McCormick	

Definition: Metropolitan and micropolitan statistical areas are geographic entities defined by the U.S. Office of Management and Budget (OMB) for use by federal statistical agencies in collecting, tabulating, and publishing federal statistics. A metropolitan area contains a core urban area of 50,000 or more population. A micropolitan area contains an urban core of at least 10,000 but less than 50,000 population. Each metropolitan or micropolitan area consists of one or more counties and includes the counties containing the core urban area, as well as any adjacent counties that have a high degree of social and economic integration with the urban core (as measured by commuting to work). Any county that is not designated a metropolitan or micropolitan area is designated as a nonmetropolitan area. The designations reported in this book are based on 2020 delineations as updated in July 2023.

SC Area Health Education Consortium (AHEC) Regions

Lowcountry (12 counties)

Allendale	Berkeley	Dorchester
Bamberg	Calhoun	Hampton
Barnwell	Charleston	Jasper
Beaufort	Colleton	Orangeburg

Mid-Carolina (11 counties)

Aiken	Kershaw	Richland
Cherokee	Lancaster	Union
Chester	Lexington	York
Fairfield	Newberry	

Pee Dee (12 counties)

Chesterfield	Florence	Marion
Clarendon	Georgetown	Marlboro
Darlington	Horry	Sumter
Dillon	Lee	Williamsburg

Upstate (11 counties)

Abbeville	Greenwood	Pickens
Anderson	Laurens	Saluda
Edgefield	McCormick	Spartanburg
Greenville	Oconee	

Definition: Each of South Carolina AHEC's four regional centers serves an 11- or 12-county region of the state where they connect students to health careers, health professionals to communities, and communities to better health. The centers do this through collaboration with healthcare entities, high schools and colleges, graduate health professions programs, and other community partners. Together, the four centers serve all 46 counties in South Carolina.

Perinatal Regions

I – Prisma Health Greenville Memorial

(10 counties)

Abbeville	Greenwood	Pickens
Anderson	Laurens	Saluda
Edgefield	McCormick	
Greenville	Oconee	

II – Spartanburg Regional (4 counties)

Cherokee	Spartanburg
Chester	Union

III - Prisma Health Richland (16 counties)

Aiken	Fairfield	Orangeburg
Allendale	Kershaw	Richland
Bamberg	Lancaster	Sumter
Barnwell	Lee	York
Calhoun	Lexington	
Clarendon	Newberry	

IV - McLeod Regional (8 counties)

Chesterfield	Florence	Marlboro
Darlington	Horry	Williamsburg
Dillon	Marion	

V - MUSC Medical (8 counties)

Beaufort	Colleton	Hampton
Berkeley	Dorchester	Jasper
Charleston	Georgetown	

Definition: Perinatal assessment regions support a geographically structured approach to assuring risk-appropriate care for all mothers and infants with a goal of improving perinatal outcomes and reducing infant mortality. There are five regions organized around the regional Perinatal Centers designated by the SC DPH.

Definition: Health Professional Shortage Areas (HPSAs) are geographic areas, populations, or facilities identified as experiencing a shortage of health care services. HPSAs are designated by the Health Resources and Services Administration based on information compiled regularly by the Primary Care Office at the South Carolina Department of Public Health. For detailed information on how HPSAs are defined, see <https://bhwhrsa.gov/workforce-shortage-areas/shortage-designation>.

*Designations may not include proposed applications under HRSA review as of December 19, 2025.
